Since the first edition of *Principles of Behavior*, the authors have sought to address the unique needs of students. This title has been written so that students of all levels will benefit from a solid introduction to the principles of behavior. The authors have laid the ground work for behavior analysis through an exploration of experimental, applied, and theoretical concepts. Case studies and everyday examples help readers apply principles of behavior to real life. Methodological accounts of research interviews find that how researchers use this tool in their work varies widely: there are many “ways” of interviewing. This edited collection unpacks the interactional dynamics of qualitative research interviews from studies conducted in education, second language acquisition, applied linguistics and disability studies from scholars in the UK, USA, Italy, Portugal and Korea. These studies explore the interactional details of how the identities of researchers and their participants matter for the generation of interview data, as well as the kinds of discursive resources and social actions that occur in tandem with the production of data for research projects. Given the widespread use of qualitative interviews for social research, this book provides a robust contribution to what Tim Rapley has called the “social studies of interviewing.” This book is relevant to audiences across disciplines who use the interview as a primary research method.

The piston engines that powered Second World War fighters, the men who designed them, and the secret intelligence work carried out by both Britain and Germany would determine the outcome of the first global air war. Advanced jet engines may have been in development but every militarily significant air battle was fought by piston-engined fighters. Whoever designed the most powerful piston engines would win air superiority and with it the ability to dictate the course of the war as a whole. This is the never-before-told story of a high-tech race, hidden behind the closed doors of design offices and intelligence agencies, to create the war's best fighter engine. Using the fruits of extensive research in archives around the world together with the previously unpublished memoirs of fighter engine designers, author Calum E. Douglas tells the story of a desperate contest between the world's best engineers – the Secret Horsepower Race.

This collection considers the financial crisis from a managerial perspective, focussing on the business implications for the financial industry. Topics examined include governance, information needs and strategy of financial intermediaries and investors. The contributions build on the existing literature and present some unique insights on governance, credit quality evaluation and performance measurement. In a fast growing or steady market, it is possible for even an inefficient financial system to satisfy investors' and firms' needs. However, the current financial crisis has brought into sharp relief the limits of the inefficient practices adopted by the market, and made clear the importance of developing more effective governance mechanisms, more detailed and complete information databases and new strategies. The crisis has also brought to the fore issues about the governance of financial intermediaries that had not been previously addressed. These include board diversity, internal monitoring procedures and the existence of interlocking directorates. More broadly, the financial crisis has radically altered the international framework, with an increasingly consolidated financial sector, and the rise of new markets (such as China) that now play a predominant role in the worldwide market. Studies on the competition and on the performance in this new scenario are essential in order to understand the implications of recent events.

Minority youth unemployment is an enduring economic and social concern. This book evaluates two new initiatives for minority high school students that seek to cultivate marketable job skills. The first is an after-school program that provides experiences similar to apprenticeships, and the second emphasizes new approaches to improving job interview performance. The evaluation research has several distinct strengths. It involves a randomized controlled trial, uncommon in assessments of this issue and age group. Marketable job skills are assessed through a mock job interview developed for this research and administered by experienced human resource professionals. Mixed methods are utilized, with qualitative data shedding light on what actually happens inside the programs, and a developmental science approach situating the findings in terms of adolescent development. Beneficial for policy makers and practitioners as well as scholars, *Job Skills and Minority Youth* focuses on identifying the most promising tactics and addressing likely implementation issues.
