The book also features an article on the duty to investigate civilian casualties during armed conflict and its implementation in practice and an elaborate year in review, discussing developments that occurred in 2012. The International Criminal Tribunal for the former Yugoslavia (ICTY) is one the pioneering experiments in international criminal justice. It has left a rich legal, institutional, and non-judicial legacy. This edited collection provides a broad perspective on the contribution of the tribunal to law, memory, and justice. It explores some of the accomplishments, challenges, and critiques of the ICTY, including its less visible legacies. The book analyses different sites of legacy: the expressive function of the tribunal, its contribution to the framing of facts, events, and narratives of the conflict in the former Yugoslavia, and investigative and experiential legacies. It also explores lesser known aspects of legal practice (such as defence investigative ethics, judgment drafting, contempt cases against journalists, interpretation and translation), outreach, approaches to punishment and sentencing, the tribunals' impact on domestic legal systems, and ongoing debates over impact and societal reception. The volume combines voices from inside the tribunal with external perspectives to elaborate the rich history of the ICTY, which continues to be written to this day.

Simple Solutions: For Planet Earth is a scientific book written in a popular style for the average reader. You have read about Peak Oil and Global Climate Warming, and complained about \$4/gallon gasoline, but how really serious are these headlines and annoyances? The author has worked his entire career on: the science, technology, education, administration and politics of these subjects, and crystallizes this complex field into understandable elements, providing simple solutions for humanity. Does it make sense for the renewable energy budget of the Federal Government to be about \$1 billion/year when: o Annual tax incentives and government programs for the oil industry are supposedly in the range between \$38 billion and \$115 billion, although Lester Brown says \$210 billion in 2005. o Farm subsidies alone in 2004 cost taxpayers \$16.2 billion. o Our country spends \$12 billion a month, or \$144 billion/year, on the Iraq and Afghanistan wars, ostensibly to protect oil, only to raise prices. The author's long experience with the Greenhouse Effect has led him to believe that methane, not carbon dioxide, could well be the critical gas of concern, for there is potential for global warming to cascade into, what he terms, the Venus Syndrome. The closing chapter speculates on a hypothesis regarding mega-tsunamis (100 meter waves) from landslides. While simple solutions are suggested, the problem is the inability of our civilization to agree on a workable strategy, which is further weakened by the lack of will on part of the general populace. Thus, the reader is urged to help make that crucial difference. Instructions and examples are provided on how to attain Rainbow Vision to carry out this mission for a better Planet Earth. The simplest solution is for everyone to join in on the effort.
