

Accounting Papers Grade 11 June 2013 Bing

Making a Grade takes historiographic and sociological perspectives developed to understand large-scale scientific and technical systems and uses them to highlight the standardization that went into "standardized testing."

Since 1845, the United States Naval Academy has prepared professional military leaders at its Annapolis, Maryland, campus. Although it remains steeped in a culture of tradition and discipline, the Academy is not impervious to change. Dispelling the myth that the Academy is a bastion of tradition unmarked by progress, H. Michael Gelfand examines challenges to the Naval Academy's culture from both inside and outside the Academy's walls between 1949 and 2000, an era of dramatic social change in American history. Drawing on more than two hundred oral histories, extensive archival research, and his own participatory observation at the Academy, Gelfand demonstrates that events at Annapolis reflect the transformation of American culture and society at large in the Cold War and post-Cold War periods. In eight chapters, he discusses recruiting and minority midshipmen, the end of mandatory attendance at religious services, women's experiences as they sought and achieved admission and later served as midshipmen, and the responses of multiple generations of midshipmen to societal changes, particularly during the Vietnam War era. This cultural history not only sheds light on events at the Naval Academy but also offers a novel perspective on democratic ideals in the United States.

February issue includes Appendix entitled Directory of United States Government periodicals and subscription publications; September issue includes List of depository libraries; June and December issues include semiannual index

The book considers the implications of the nuclear energy revival for global governance in the areas of safety, security and non-proliferation. Increased global warming, the energy demands of China, India and other emerging economic powerhouses and the problems facing traditional and alternative energy sources have lead many to suggest that there will soon be a nuclear energy 'renaissance'. This book examines comprehensively the drivers of and constraints on the revival, its nature and scope and the possibility that nuclear power will spread significantly beyond the countries which currently rely on it. Of special interest are developing countries which aspire to have nuclear energy and which currently lack the infrastructure, experience and regulatory structures to successfully manage such a major industrial enterprise. Of even greater interest are countries that may see in a nuclear energy program a 'hedging' strategy for a future nuclear weapons option. Following on from this assessment, the author examines the likely impact of various revival scenarios on the current global governance of nuclear energy, notably the treaties, international organizations, arrangements and practices designed to ensure that nuclear power is safe, secure and does not contribute to the proliferation of nuclear weapons. The book concludes with recommendations to the international community on how to strengthen global governance in order to manage the nuclear energy revival prudently. This book will be of much interest to students of energy security, global governance, security studies and

IR in general.

Vol. for 1963 includes section Current Australian serials; a subject list.
