A journey into the vibrant and intriguing world of mathematics education *Teaching Mathematics in Grades 6 - 12* explores how research in mathematics education can inform teaching practice in grades 6-12. The author shows secondary mathematics teachers the value of being a researcher in the classroom by constantly experimenting with methods for developing students' mathematical thinking and then connecting this research to practices that enhance students' understanding of the material. The chapters in Part I introduce secondary teachers to the field of mathematics education with cross-cutting issues that apply to teaching and learning in all mathematics content areas. The chapters in Part II are devoted to specific mathematics content strands and describe how students think about mathematical concepts. The goal of the text is to have secondary math teachers gain a deeper understanding of the types of mathematical knowledge their students bring to grade 6 – 12 classrooms, and how students' thinking may develop in response to different teaching strategies.

shows how the sense of schools as special communities can help instill passion and commitment in teachers, administrators, and students alike - and how passion and commitment are absolutely necessary for educational success. The power of economic resources, invested fully in schools, also becomes pointedly clear here, as does the value of incentives for teachers and students.

This book provides teachers with practical ways of constructing lessons that will engage students and help them develop personal responsibility for their own learning. State learning standards and related core curricula require students to demonstrate what they know and understand. Students cannot learn to demonstrate their understanding if they sit passively. The authors call for constructivist practices which recognize the important role played by standards and student accountability, and which also acknowledge the practical need for lecture in an appropriate context. This book also shows the links between constructivism and differentiated instruction and other approaches to teaching and learning.

The well attended March 1994 Hlse workshop in Amsterdam was a very lively conference which stimulated much discussion and human-human interaction. As the editor of this volume points out, the Amsterdam meeting was just part of a year-long project that brought many people together from many parts of the world. The value of the effort was not only in generating new ideas, but in making people aware of work that has gone on on many fronts in using computers to make mathematics more understandable. The author was very glad he attended the workshop. \* In thinking back over the conference and in reading the papers in this collection, the author feels there are perhaps four major conclusions to be drawn from the current state of work: 1. graphics is very important, but such features should be made as easy to use as possible; 2. symbolic mathematical computation is very

powerful, but the user must be able to see "intermediate steps"; 3. system design has made much progress, but for semester-long coursework and book-length productions we need more tools to help composition and navigation; 4. monolithic systems are perhaps not the best direction for the future, as different users have different needs and may have to link together many kinds of tools. The editor of this volume and the authors of the papers presented here have also reached and documented similar conclusions.

In *The Qualified Student* Harold S. Wechsler focuses on methods of student selection used by institutions of higher education in the United States. More specifically, he discusses the way that college and university reformers employed those methods to introduce higher education into a broader cross-section of America, by extending access to an increased number of students from nontraditional backgrounds. Implicit in much of this

book is an underlying social and ethical question: How legitimate was and is higher education's regulation of social mobility? Public concern over colleges' and universities' practices became inevitable once they became regulators between social classes. The challenging of colleges' admissions policies in the courts augments similar concerns that have been present in legislatures for decades. The volume is divided into three main sections: Prerequisites, Columbia and the Selective Function, and Implications. It focuses mainly on four universities, The University of Michigan, Columbia University, the University of Chicago, and the City University of New York. Wechsler maintains that unlike other universities, these institutions were pacesetters; they did not adopt a new policy simply because some other college had already adopted it. A new introduction brings the book, originally published in 1977, up to date and demonstrates its continuing importance in today's academic world of selective admissions.

Describes how to incorporate technology into the social studies curriculum, covering such topics as lesson plans, instructional models, and assessment strategies.

Research Questions: To what extent does using Cornell Notes while students are reading their required weekly chapter increase their AP format test scores? (1) How does the use of Cornell Notes help them recall specific details that will help them distinguish between similar answers on multiple choice questions? (2) How does the use of this strategy affect their ability to support their essay statements with facts? (3) How does the use of Cornell Notes impact my students' attitudes towards the

effectiveness of their study time and their test taking capabilities? Research Activities: Context: This intervention took place with all 16 of the students in an Advanced Placement (AP) United States History classroom; one student was a 10th grade student who had met the 10th grade history requirements by taking summer classes at a community college, and the rest of the students in the class were in 11th grade. This intervention was conducted in a medium sized high school (circa 2000 students) in a small city in central California. I was not the teacher of record in this classroom, but I collaborated closely with the class's teacher, who has had 30 years of experience, including several years teaching AP U.S. History. The demographics of the class approximate those of the school, with 8 Caucasian students, 7 Hispanic students, and 1 African American student. Only one student had taken the CELDT test and was Re-designated as English Proficient (RFEP) in 2003. He had no apparent difficulty with either comprehension or expression in English, and I do not believe his language background affected his performance during the intervention. Methods and Data: Before my intervention, I administered a survey to the students that ascertained their study habits at the time. The primary assessment that I used to examine students performance was the AP format tests that the students normally took about once a week. After collecting initial data on the multiple choice and essay sections of one of these tests, I then taught them how to use Cornell Notes, a structured note-taking method which involves dividing a page into two columns and reviewing notes a few

times. This consisted of an initial lesson with direct instruction on the method, in class guided practice, and time in class for independent practice. The students were instructed to finish taking Cornell Notes on their own when they completed that week's reading, and they kept them to use as a study guide until turning them in at the start of that week's test. Students were given shorter follow up lessons to reinforce parts of the note-taking method that seemed to be lacking after students turned in their first full set of completed notes. Multiple choice and essay portion test scores were collected during and after the 3 weeks that students were required to take and use Cornell Notes. Students were then given a survey after the intervention to determine if they felt that using Cornell Notes had helped them and to discover how closely they had followed the note-taking method when working on their notes independently. Results: While individual student performance varied, the aggregate performance of the class did not change significantly during the course of the intervention. The class average of multiple choice section test scores went down slightly (just over 1 percent), and the class average of essay section test scores went up slightly (under 2 percent). There are so many other factors that may have affected the students' performance that such small changes cannot be attributed to the intervention itself. However, most students expressed on the post-intervention survey that they felt that using Cornell Notes helped them. These opinions did not correlate with student achievement on an individual basis, but several students said they intended to keep using them despite the fact

that they would no longer be required for class credit.
