Drug Discovery and Evaluation has become a more and more difficult, expensive and time-consuming process. The effect of a new compound has to be detected by in vitro and in vivo methods of pharmacology. The activity spectrum and the potency compared to existing drugs have to be determined. As these processes can be divided up stepwise we have designed a book series "Drug Discovery and Evaluation" in the form of a recommendation document. The methods to detect drug targets are described in the first volume of this series "Pharmacological Assays" comprising classical methods as well as new technologies. Before going to man, the most suitable compound has to be selected by pharmacokinetic studies and experiments in toxicology. These preclinical methods are described in the second volume „Safety and Pharmacokinetic Assays". Only then are first studies in human beings allowed. Special rules are established for Phase I studies. Clinical pharmacokinetics are performed in parallel with human studies on tolerability and therapeutic effects. Special studies according to various populations and different therapeutic indications are necessary. These items are covered in the third volume: „Methods in Clinical Pharmacology".

In this brief discussion of recent medical history, I have tried to enable the reader to appreciate the dramatic improvement in health-care delivery, which occurred during the century following the American Civil War. In reference, one might compare the efficiency of transatlantic transport by sail to that of oceangoing steamships during the last quarter of the nineteenth century. All too frequently, one is tempted to believe that accurate diagnostic information and successful management of illness has been available for an indefinite period. One needs to only reflect on the deficiencies described in this volume, which persisted well into the twentieth century to appreciate the remarkably rapid evolution of medical care, which we regularly enjoy today.

Looks at the essential concepts in the science of pharmacology and its application to clinical practice.
