Essay from the year 2005 in the subject Business economics - Business Ethics, Corporate Ethics, grade: A+, University of Otago (Department of Management), course: International Management, 45 entries in the bibliography, language: English, abstract: As long as human societies exist, the life of man has been based on norms, rules, values and practices that governed human behaviour. Individual and communal-shared ethics even make life within society possible as we know it. Part of this social life is doing business, in form of exchanging goods to fulfil basic needs and to achieve higher levels of satisfaction for oneself and for others. However, to combine moral thinking and acting with today's business activities in a free market economy seems to be counterintuitive. Somehow both notions do not really fit together. Still, Corporate Codes of Ethics exist. This essay consist of two parts. Each part reflects one question or problem that I found worthy of having more light shed on it. The first part answers the question "Why do corporate Codes of Ethics exist?" or "Why do corporations establish corporate Codes of Ethics?" under the basic assumptions, that ethics are 'costly' and therefore against the idea of maximising profit which is predominant in the market ideology. Proving these assumptions is not so easy. First the term ethics will be defined and selected theories which could be the basis for Codes of Ethics will be portrayed. Then it is important to know what kind of morality is underlying the modern market ideology as we know it. Following that a correlation is sought between the market morality and corporate ethics, ending in the insight that corporate morality is costly and, therefore, is against economic intuition. Part one finishes then with a surprisingly simple answer to the question why codes exist. The second part brings the findings of the first part in a broader context. The considered corporation of part one now 'grows' beyond borders and begins to

This book investigates how ethics generally precedes legal regulation, and looks at how changes in codes of ethics represent an unparalleled window into the research, innovation, and emerging technologies they seek to regulate. It provides case studies from the fields of engineering, science, medicine and social science showing how professional codes of ethics often predate regulation and help shape the ethical use of emerging technologies and professional practice. Changes in professional ethics are the crystallization of ongoing conversation in scientific and professional fields about how justice, privacy, safety and human rights should be realized in practice where the law is currently silent. This book is a significant addition to this area of practical and professional ethics and is of particular interest to practitioners, scholars, and students interested in the areas of practical and applied ethics.

In this volume, a distinguished group of experts from the fields of medicine, bioethics, and the history of medicine reflect on the development of medical ethics in the United States, using historical analyses as a springboard for discussions of the problems of the present, including what the editors call "a sense of moral crisis precipitated by the shift from a system of fee-for-service medicine to a system of fee-for-system medicine, better known as 'managed care.'"--BOOK JACKET.

Drawing upon a variety of important philosophical traditions, this book develops an original perspective on the relations between ethical, economic and aesthetic values in a tourism context. It considers the ethical/political issues arising in many areas of tourism development, including: the profound cultural and environmental impacts on tourist destinations the reciprocity (or lack of) in host-guest relations the (un)fair distribution of benefits and revenues the moral implications of issues such as sex tourism, staged authenticity and travel to oppressive regimes. The book concludes with a detailed investigation of the potential and pitfalls of ecotourism, sustainable tourism and community-based tourism, as examples of what is sometimes termed 'ethical tourism.' Until now, the ethical issues that surround tourism development have received little academic attention. Explaining philosophical arguments without the use of excessive jargon, this fascinating book interweaves theory and practice, aided by the use of text boxes to explain key terms in ethics, politics, and tourism development, and drawing on contemporary case studies from South Africa, Mexico, Zambia, Honduras, Ethiopia and Madagascar.

In the final section of the book, thirty case studies explore a wide range of ethical dilemmas encountered in architectural practice, with useful guidance on how to work through them effectively. Arranged by topics that span the key phases of a project from pre-design through post-occupancy evaluation, these case studies allow a detailed look at ethical concerns in real-life situations where multiple issues are often at stake. Drawing on psychological, theological, and cultural studies on suffering, Carrie Doehring encourages counselors to view their ministry through trifocal lenses and include approaches that are premodern (apprehending God through religious rituals), modern (consulting rational and empirical sources), and postmodern (acknowledging the contextual nature of knowledge). Utilizing strategies from all three perspectives, Doehring describes the basic ingredients of a caregiving relationship, shows how to use the caregiver's life experience as a source of authority, and demonstrates how to develop the skill of listening and establish the actual relationship. She then explains the steps of psychological assessment, systemic assessment, and theological reflection, and finally she delineates the basic steps for plans of care: attending to the careseeker's safety, building trust, mourning losses, and reconnecting with the ordinariness of life.
