More than 25 years have elapsed since the first application of immunofluorescent techniques in dermatology. These techniques have shed light on many problems concerning skin disorders. Microorganisms, antigens and antibodies, complements and enzymes have been observed in both intracellular and extracellular tissues. This is the first comprehensive atlas on dermato-immuno-histocytology; it collects the most outstanding studies and accompanying photographs carried out by 83 Japanese dermatologists. Patients with perianal diseases such as dermatitis do not just visit the dermatologist; they are seen by family doctors, internists, pediatricians, general surgeons, gynecologists, and urologists. This book is truly multi-disciplinary, introducing the surgical specialties to medical proctology and related fields. The procedures described allow effective management of both common and less common diseases, including all the secondary problems that may arise. With increasing travel and increasing immunosuppression, parasitic intestinal diseases are now seen in every type of practice. The standard diagnostic procedures described herein reduce costs in therapy. This new reference in proctology and perianal skin disease gives detailed descriptions of clinical features, laboratory diagnosis, and treatment strategies. It will empower a wide variety of physicians to manage these disorders more effectively.

Infections of the skin have become significantly more important with the rapidity of world travel, the emergence of new pathogenic organisms or strains, and the increased incidence of immunocompromised patients. This atlas will illustrate cutaneous disease due to bacteria, rickettsiae, viruses, fungi and parasites. While emphasis will be placed upon the more common entities encountered by clinicians in the Western World, appropriate attention will be given to newer diseases that might be encountered in travelers to or emigrants from less developed areas of the world. Each chapter will give an overview of the pathogenic agent and the clinical problems it causes. Colour photographs will amplify the concepts set forth by the accompanying brief text.
