Every year some 330 million tonnes of waste are produced in the UK. The direct costs of managing this waste-£2.5 billion annually for English household waste alone-are dwarfed by the costs of using new resources to replace discarded materials. The Government should, as a priority, set out a timetable with significantly raised targets for reducing the total amount of waste produced. The waste strategy focuses disproportionately on domestic waste, which contributes less than 10 per cent of all waste, while omitting firm targets for the commercial and industrial sectors which produce around a quarter of all waste. Defra must rectify this urgently. Funding cuts to services designed to help businesses manage their waste well are premature and should be re-evaluated and ways to extend such services to a wider range of organisations should be considered. Far too small a proportion of waste is re-used, recycled, composted or used to produce energy. Nearly half of all waste is still sent to landfill sites where it contributes to climate change, producing 3 per cent of the country's greenhouse gases and 40 per cent of its methane emissions. The Committee notes the so-called "Primark effect" which has led to large increases in the amount of clothing sent to landfill sites. Food waste is another significant component of waste sent to landfill sites and householders, food producers and retailers need to do more to reduce the amount of food discarded unnecessarily. Waste should only be used for energy recovery if it is not possible to re-use, recycle or compost it. In this text, the authors trace the influence of the European Union on domestic politics and public policies. It looks at different countries one by one and embraces an innovative perspective based on specific concepts, indicators, and a broad range of thematic issues.

Business in Korea North for Everyone: Practical Information and Contacts for Success

Call centers have come, in the last three decades, to define the interaction between corporations, governments, and other institutions and their respective customers, citizens, and members. The offshoring and outsourcing of call center employment, part of the larger information technology and information-technology-enabled services sectors, continues to be a growing practice amongst governments and corporations in their attempts at controlling costs and providing new services. While incredible advances in technology have permitted the use of distant and "offshore" labor forces, the grander reshaping of an international political economy of communications has allowed for the acceleration of these processes. New and established labor unions have responded to these changes in the global regimes of work by seeking to organize call center workers. These efforts have been assisted by a range of forces, not least of which is the condition of work itself, but also attempts by global union federations to build a bridge between international unionism and local organizing campaigns in the Global South and Global North. Through an examination of trade union interventions in the call center industries located in Canada and India, this book contributes to research on post-industrial employment by using political economy as a juncture between development studies, the sociology of work, and labor studies.

This volume brings both beginning and experienced translators and interpreters up to date on a broad range of issues. The seven sections take up success and survival strategies for a language professional, including the challenges posed by the changing global economy, the impact of new technologies, adjustments required by a different legal environment and traditional ethical practices. Such challenges and changes point to a need for continuing education and networking and for newcomers specialized postsecondary training. The issues are as broad as the translator and interpreter's role in the modern world, as detailed as advice on setting up a workstation or choosing a degree program. The contributors, all practicing translators and interpreters, discuss also the value of the Association and its Committees to the profession and its individual members.

This book is not about global warming and whether it is taking place or not, how fast it is and what effects it will have. Nor is it about population growth. Nor is it about running out of effective vaccines and antibiotics. Those issues, in isolation, are covered in great depth by many other sources. This book brings the three together, considering the possibility of the triad becoming critical at the same time. Experts disagree on exact dates, but the most likely period this will happen to us is some time between 2030 and 2040 if we are lucky, a little earlier if not! If and when this three-fold tipping point occurs, there will only be a short period before a major collapse in global population, a humanitarian disaster on a scale of unprecedented magnitude. This book is not designed to scare or frighten the reader, but to help them consider the true risk of this upcoming catastrophe. Once understood, it then details a powerful solution available to us with current technology: the global Bio-Active Carbon Sink.

While the need for effective action toward a greener and socially inclusive economy has long been evident, health promotion in the context of sustainable development has faltered. Arguing that human health is the key factor to sustainable development, Development and Sustainability promotes a fresh, transdisciplinary approach to the eradication of extreme poverty. This ground-breaking book calls for new forms of cooperation which cross the traditional boundaries between social activism and science, and which are capable of harnessing the complex knowledge that such radical change requires. The contributions bridge the gap between those working for health and those working for sustainability science and the green economy, through developing the methodological and scientific means to deal with some of the most critical issues faced by humanity in the twenty-first century.

With globalization in every area of human activity being a key trend of the 1990s, better and faster networks will have an increasingly important role and impact in making the 'global village' a reality. The papers collected in this volume highlight the global nature of the activities and the tremendous pace of R&D in the field of communications and networking.

National broadcasting and press regulation is undergoing a process of convergence in Europe. This book explains how this process has been shaped by the actions of the European Union (EU) institutions. Alison Harcourt observes that whilst communications is one of the EU's most successful policy areas, European decision-making is eroding the national capacity to regulate for the public interest and has created a situation of regulatory arbitrage in Europe. European-level efforts to protect public interest goals have been constrained by the European Treaties. The author argues that increased European coordination in public interest regulation could be more conducive to growth and competitiveness than the dismantling of existing national laws. This, however, would require changes to the political composition of the European Union.

Over the past ten years there has been a massive growth in call centres worldwide. These centres are said to represent the most dynamic growth area in white-collar employment internationally since the mid 1990s. Yet the footloose and global nature of the industry means that jobs will always be susceptible to outsourced operations, ICT developments, public sector subsidization of business restructuring and re-location, and cheaper operations elsewhere. This book conducts a thorough analysis of this modern phenomenon.

An encyclopedic view of doing business with Japan. Contains the how-to, where-to and who-with information needed to operate internationally.

David Icke's strongest book to date, *The Robots' Rebellion* reveals the alarming extent to which people of all nations are programmed by the ideas fed to them by those in power. We live in a world which is increasingly dominated by technology but, according to Icke, it is we who are the robots. Fearlessly, he tears down the veils of hypocrisy, built up for generations by the corrupt forces of Church, State, science and commerce — and reveals the true pathos of the human condition beneath. He points, too, to the frightening influence wielded throughout the planet by a merciless and manipulative network of secret societies. The existence of long-established links between Earth-bound humanity and beings from other dimensions and planets in the Universe has been suppressed for years, says Icke, by the world's power-broking hierarchy. When ordinary people learn the real role they have to play within a rich and varied cosmic society, rebellion against those who have kept this extraordinary truth from them will, he predicts, be inevitable. The author is no stranger to controversy. Formerly best-known as a TV sports commentator and leading spokesman for the British Green Party, he is gaining increasing authority as a tireless campaigner for truth. His widely-publicised spiritual transformation has given him the courage to speak out fearlessly against lies and deceit. Hidebound politicians, bankers, economists, educationalists, scientists and the leaders of the world's established religions are not going to welcome Icke's challenging book. But it is not intended for those who wield and abuse power. This book is for the world's unwilling robots who, says Icke, in an upbeat conclusion, have it within themselves to rise up — and take control of their own exciting destiny. *The Robots' Rebellion*: Table of Contents Introduction Remember Who You Are PART ONE: The Darkness The Takeover Bid Collective Amnesia The Brotherhood of Clans Bible Stories Hell on Earth Arabian Knights The Cracks Appear Eagle Tails The Rule of Science The World at War Big is Beautiful The New World Order When Will We Ever Learn?
