Understanding personal relationships throughout the life course is one of the most crucial issues in the behavioral and social sciences. This book brings together perspectives from different disciplines on individual development and personal relationships across the life span. The book addresses two pertinent dimensions of personal relationships: 1) structures of relationship networks (e.g. kin vs non-kin, peripheral vs intimate, short-term vs long-term) and 2) processes (i.e. change or stability) and outcomes of personal relationships across the life span. The book stimulates discussion of personal relationships as resources for and outcomes of individual development throughout the life course. Different qualities of personal relationships serve as catalysts for individual development. At the same time, relationship qualities reflect changes of developing individuals. The book does not give exclusive priority to one phase of the human life span. Rather, each chapter addresses social development across the entire life span from childhood to later adulthood.

The field of educational neuroscience uses new insights about the neural mechanisms of learning to improve educational practices and outcomes. The first volume to bring together the latest knowledge on the development of educational neuroscience from a life-span perspective, this important text offers state of the art, authoritative research findings in educational neuroscience before providing evidence-based recommendations for classroom practice. Thomas, Mareschal, Dumontheil and the team of expert international contributors thoroughly explore four main themes throughout the book. The first focus is on individual differences, or what makes children perform better or worse in the classroom. The second is to consider this question at different stages in development, from early years into adulthood. The third part of the book covers cognitive enhancement, summarising research that has investigated activities that might give general benefits to cognition. Finally, contributors consider the translation of research findings into classroom practices, discussing broader ethical issues raised by educational neuroscience, and what teachers need to know about neuroscience to enhance their day-to-day practice. Specific topics explored include neuropsychological perspectives on socioeconomic disparities in educational achievement, reading difficulties, phonological skills, executive function and emotional development. Educational Neuroscience is essential reading for researchers and graduate students of educational psychology, developmental science, developmental psychology, cognitive psychology, especially those specializing in emotion regulation.

Social Cognition brings together diverse and timely writings that highlight cutting-edge research and theories on the development of social cognition and social behavior across species and the life span. The volume is organized according to two central themes that address issues of continuity and change both at the phylogenetic and the ontogenetic level. First, the book addresses to what extent social cognitive abilities and behaviors are shared across species, versus abilities and capacities that are uniquely human. Second, it covers to what extent social cognitive abilities and behaviors are continuous across periods of development within and across the life span, versus their change with age. This volume offers a fresh perspective on social cognition and behavior, and shows the value of bringing together different disciplines to illuminate our understanding of the origins, mechanisms, functions, and development of the many capacities that have evolved to facilitate and regulate a wide variety of behaviors fine-tuned to group living.

Choice Recommended Read Leo B. Hendry is one of the foremost developmental psychologists of his generation. His diverse range of interests have included studies on young people's involvement in competitive sports, investigations into teacher and pupil relations in school, adolescents' leisure pursuits and their family relations, parenting styles, youth workers and mentoring, youth unemployment, adolescent health behaviours, and transition to early adulthood. His research interests now include work on ageing and retirement. *Developmental Transitions across the Lifespan* is the first collection of Hendry's works, and essentially joins the dots to provide an overarching perspective on lifespan development through a dynamic systems theory approach. Underpinned by empirical research, this collection of journal articles and book chapters is linked by a contemporary commentary which not only contextualises each piece within today's research climate, but builds to provides an unorthodox, comprehensive but above all compelling perspective on human development from childhood to old age. Leo B. Hendry's research output has been significant and influential. This is an important book that will provide students and researchers in developmental psychology not only with an opportunity to view his contribution holistically, but in connecting his range of research interests, provides a new contribution to our understanding of lifespan development in its own right.

Providing a solid foundation in the normal development of functional movement, *Functional Movement Development Across the Life Span, 3rd Edition* helps you recognize and understand movement disorders and effectively manage patients with abnormal motor function. It begins with coverage of basic theory, motor development and motor control, and evaluation of function, then discusses the body systems contributing to functional movement, and defines functional movement outcomes in terms of age, vital functions, posture and balance, locomotion, prehension, and health and illness. This edition includes more clinical examples and applications, and updates data relating to typical performance on standardized tests of balance. Written by physical therapy experts Donna J. Cech and Suzanne "Tink" Martin, this book provides evidence-based information and tools you need to understand functional movement and manage patients' functional skills throughout the life span. Over 200 illustrations, tables, and special features clarify developmental concepts, address clinical implications, and summarize key points relating to clinical practice. A focus on evidence-based information covers development changes across the life span and how they impact function.

A logical, easy-to-read format includes 15 chapters organized into three units covering basics, body systems, and age-related functional outcomes respectively. Expanded integration of ICF (International Classification of Function) aligns learning and critical thinking with current health care models. Additional clinical examples help you apply developmental information to clinical practice. Expanded content on assessment of function now includes discussion of participation level standardized assessments and assessments of quality-of-life scales. This interdisciplinary volume presents international research and theories focusing on the development of the individual across the life span. Centering on "family" as the key context influencing, and being influenced by the developing person, the contributors to this volume discuss an array of theoretical models, methodological strategies, and substantive foci linking the study of individual development, the family system, and the broader context of human development. The volume presents continuing empirical research and theories in the realm of individual and family development and features a developmental, contextual view from a process-oriented vantage point.

The 2nd edition of this expert text emphasizes normal development and function, examining how function is attained and how it can be optimized across the life span. Its logical organization and presentation equips readers with the background and tools

needed to understand the components of functional movement. A solid grounding in normal development, including the cellular and systems changes that begin in the embryo and continue throughout life, enables readers to recognize, understand, and appropriately treat abnormal motor function.

**Executive Function:** *Development Across the Life Span* presents perspectives from leading researchers and theorists on the development of executive function from infancy to late adulthood and the factors that shape its growth and decline. Executive function is the set of higher-order cognitive processes involved in regulating attention, thoughts, and actions. Relative to other cognitive domains, its development is slow and decline begins early in late adulthood. As such, it is particularly sensitive to variations in environments and experiences, and there is growing evidence that it is susceptible to intervention – important because of its link to a wide range of important life outcomes. The volume is made up of four sections. It begins with an overview of executive function's typical development across the lifespan, providing a foundation for the remainder of the volume. The second section presents insights into mechanisms of executive function, as provided by a variety of methodological approaches. The third and fourth sections review the current research evidence on specific factors that shape executive function's development, focusing on normative (e.g., bilingualism, physical activity, cognitive training) and clinically relevant (e.g., substance use, neurodegenerative disease) developmental pathways.

User-friendly in approach with a variety of pedagogical tools and an abundance of take-home information, this broad, balanced, comprehensive overview of life-span development integrates theories, research, and applications with particular emphasis on relevance to students' lives. Organised chronologically, it covers the entire range of human life from the moment of conception through death and examines both the traditional areas of the field as well as more recent innovations.

This book offers insights from a seven-year study into the impact of English as an International Language at a national level, from the effect of rich English input on a previously monolingual people's linguistic repertoire to its effect on the situated language use demanded of speakers who find themselves in a new linguistic environment for which they have not been prepared. The changes described in the book have occurred in a speech community that identifies strongly with the local language, but finds itself increasingly having to use another language to perform daily functions in education and work. Findings describe how the official language and educational policies have not addressed this new linguistic ecology of Iceland. The findings of these studies have larger international practical, educational, empirical, and theoretical implications and should be relevant to anyone interested in the impact of English as an International Language.

Both implicit and existential meaning are important constructs in fully understanding human experience. The editors of this volume present a forum for an array of viewpoints and recent research that address the notion of optimal human growth.

This second edition of *Career Counseling Across the Lifespan: Community, School, Higher Education, and Beyond* is the latest volume in the *Issues in Career Development Series*, edited by Drs.
