Prepares Students for the End-of-Grade ELA/Reading Tests! This book will develop the reading skills that students need, while preparing students for North Carolina

What is your moose IQ? With level G of Reading for Comprehension, your students will learn all about this kid-friendly topic and many more. This book for grade 7 students includes 46 high-interest, nonfiction articles with questions that reinforce key reading and writing skills commonly found on state tests. Multiple-choice questions test these reading skills: vocabulary, main idea and details, sequence, cause and effect, and inferences and conclusions. Students also answer open-ended questions to practice writing narrative text, descriptive text, persuasive text, and expository text.

Reading comprehension is a multi-dimensional process that includes the reader, the text, and factors associated with the activity of reading. Most research and theories of comprehension are based primarily on research conducted with monolingual English speakers (L1). Thus, it is important to investigate the cognitive and linguistic factors that have an influence on reading comprehension of English-as-a-Second-Language (ESL) speakers, especially during the higher grades, when there is a shift from "learning to read" to "reading to learn". This study examined the cognitive aspects of reading comprehension among L1 and ESL speakers in the seventh grade. The performance of both groups was compared and the role of relevant processes, including, memory, phonological awareness, morphological and syntactic awareness, word reading and fluency was assessed. Three comprehension groups were examined: (1) children with poor comprehension in the absence of word reading difficulties, (2) children with poor word reading and poor comprehension, and (3) children with good word reading and comprehension abilities. ESL and the L1 students in grade 7 performed in a similar way on all the reading comprehension measures, word reading and underlying cognitive measures. Only on two language related measures, syntactic awareness and working memory for words, the L1 students performed better than the ESL. Similar prevalence of reading comprehension subgroups was found for ESL and L1 students, with under 2 percent of students classified as reading disabled. The profile of students with poor comprehension was presented as well as profile of students with poor reading skills. Implications

for identification of reading comprehension subgroups and for reading comprehension programs were discussed. In addition, the role of the school psychologist in relation to reading comprehension skills was presented. This book presents a pioneering longitudinal study on English language instruction at the elementary school (ELES) level in the Japanese public school system. It attempts to identify those domains most sensitive to early English instruction by employing a state-of-the-art quantitative research methodology. English education was formally introduced in Japan for fifth and sixth graders in 2011 and is still in its infancy as a program. This study compares two groups (Grade 7 and 8) of students, one with ELES and one without, in order to shed light on their experiences. Comparisons are carried out not only quantitatively, measuring changes in English skills (listening, speaking, reading, and vocabulary / grammar) and the ELES students' affective aspects, but also qualitatively through in-depth interviews. Thus, this study attempts to capture the ELES students' experiences from a multi-dimensional perspective. The comprehensive literature review provided offers a valuable resource not only for researchers looking for a quick digest of the literature in this field before undertaking their own research, but also for policy-makers seeking to assess how to best implement ELES.
