In *Don't Be Such a Scientist*, Randy Olson recounts the lessons from his own hilarious--and at times humiliating--evolution from science professor to Hollywood filmmaker, sharing the secrets of talking substance in an age of style. The key, he argued, is to stay true to the facts while tapping into something more primordial, more irrational--and ultimately more human. Now, in this second edition of his provocative and groundbreaking book, Olson builds upon the lessons and storytelling of *Don't Be Such a Scientist*, providing an epilogue to each chapter for the current times, and adding a fresh introduction and new chapter on the importance of listening for science communicators (and beyond). *Don't Be Such a Scientist, Second Edition* is a cutting and irreverent manual to speaking out and making your voice heard in an age of attacks on science. Invaluable for anyone looking to break out of the boxes of academia or research, Olson's writing will inspire readers to "make science human"--and to enjoy the ride along the way.

The field of knowledge management focuses on how organizations can most effectively store, manage, retrieve, and enlarge their intellectual properties. The repository view of knowledge management emphasizes the gathering, providing, and filtering of explicit knowledge. The information in a repository has the advantage of being easily transferable and reusable. But it is not easy to use decontextualized information, and users often need access to human experts. This book describes a more recent approach to knowledge management, which the authors call "expertise sharing." Expertise sharing emphasizes the human aspects -- cognitive, social, cultural, and organizational -- of knowledge management, in addition to information storage and retrieval. Rather than focusing on the management level of an organization, expertise sharing focuses on the self-organized activities of the organization's members. The book addresses the concerns of both researchers and practitioners, describing current literature and research as well as offering information on implementing systems. It consists of three parts: an

introduction to knowledge sharing in large organizations; empirical studies of expertise sharing in different types of settings; and detailed descriptions of computer systems that can route queries, assemble people and work, and augment naturally occurring social networks within organizations.
