The second edition of *Prairie Directory of North America* is a comprehensive guide to locating North American public prairies, grasslands, and savannas.

Revolutionary Negotiations examines early American diplomatic negotiations with both the European powers and the various American Indian nations from the 1740s through the 1820s. Sadosky interweaves previously distinct settings for American diplomacy—courts and council fires—into one singular, transatlantic system of politics. Whether as provinces in the British Empire or as independent states, American assertions of power were directed simultaneously to the west and to the east—to Native American communities and to European empires across the Atlantic. American leaders aspired to equality with Europeans, who often dismissed them, while they were forced to concede agency to Native Americans, whom they often wished they could ignore. As Americans used diplomatic negotiation to assert their new nation's equality with the great powers of Europe and gradually defined American Indian nations as possessing a different (and lesser) kind of sovereignty, they were also forced to confront the relations between the states in their own federal union. Acts of diplomacy thus defined the founding of America, not only by drawing borders and facilitating commerce, but also by defining and constraining sovereign power in a way that privileged some and weakened others. These negotiations truly were revolutionary.

to environmental protection. The book's topical, operational, and relational essays address development of U.S. environmental policies, the federal agencies and public and private organizations that frame and administer environmental policies, and the challenges of balancing conservation and preservation against economic development, the ongoing debates related to turning environmental concerns into environmental management, and the role of the U.S. in international organizations that facilitate global environmental governance. Key Features: 30 essays by leading conservationists and scholars in the field investigate the fundamental political, social, and economic processes and forces driving policy decisions about the protection and future of the environment. Essential themes traced through the chapters include natural resource allocation and preservation, human health, rights of indigenous peoples, benefits of recycling, economic and other policy areas impacted by responses to green concerns, international cooperation, and immediate and long-term costs associated with environmental policy. The essays explore the impact made by key environmental policymakers, presidents, and politicians, as well as the topical issues that have influenced U.S. environmental public policy from the colonial period to the present day. A summary of regulatory agencies for environmental policy, a selected bibliography, and a thorough index are included. This must-have reference for political science and public policy students who seek to understand the forces that U.S. environmental policy is suitable for academic, public, high school, government, and professional libraries.

While the concept of an Atlantic world has been central to the work of historians for decades, the full implications of that spatial setting for the lives of religious people have received far less attention. In *Religion, Space, and the Atlantic World*, John Corrigan brings together research from geographers, anthropologists, literature scholars, historians, and religious studies specialists to explore some of the possibilities for and benefits of taking physical space more seriously in the study of religion. Focusing on four domains that most readily reflect the importance of Atlantic world spaces for the shape and practice of religion (texts, design, distance, and civics), these essays explore subjects as varied as the siting of churches on the Peruvian Camino Real, the evolution of Hispanic cathedrals, Methodist identity in nineteenth-century Canada, and Lutherans in early eighteenth-century America. Such essays illustrate both how the organization of space was driven by religious interests and how religion adapted to spatial ordering and reordering initiated by other cultural authorities. The case studies include the erasure of Native American sacred spaces by missionaries serving as cartographers, which contributed to a view of North America as a vast expanse of unmarked territory ripe for settlement. Spanish explorers and missionaries reorganized indigenous-built space to impress materially on people the "surveillance power" of Crown and Church. The new environment and culture often transformed old institutions, as in the reconception of the European cloister into a distinctly American space that offered autonomy and solidarity for religious women and served as a point of reference for social stability as convents

assumed larger public roles in the outside community. Ultimately even the ocean was reconceptualized as space itself rather than as a connector defined by the land masses that it touched, requiring certain kinds of religious orientations—to both space and time—that differed markedly from those on land. Collectively the contributors examine the locations and movement of people, ideas, texts, institutions, rituals, power, and status in and through space. They argue that just as the mental organization of our activity in the world and our recall of events have much to do with our experience of space, we should take seriously the degree to which that experience more broadly influences how we make sense of our lives.

This book focuses on the effects of interaction between Indian and non-Indian peoples and on the complex relationships between Indians and their environments. It presents information for an accurate assessment of whether North American Indians can survive as a distinct culture. .

Pulitzer-Prize-winning author Bernard Bailyn brings us a book that combines portraits of American revolutionaries with a deft exploration of the ideas that moved them and still shape our society today.

Relive the Clashes that Shaped Colonial America Today Americans remember 1776 as the beginning of an era. A nation was born, commencing a story that continues to this day and that we ourselves are a part of. But the War of Independence also marked the end of another era—one in which many nations, Native American and European, had struggled for control of a vast and formidable wilderness. That saga, though separated from us now by a gulf of time that makes it seem strange and even alien, was the history out of which our own emerged. This book returns to that long-ago age, traveling through land that now forms part of the United States but that once knew a reality in which the clash between America's first peoples and the newcomers from Europe was still new. Focusing on events that are all but forgotten today, author Cormac O'Brien's masterful storytelling reveals how actors as diverse as Spanish conquistadores, Puritan ministers, Amerindian sachems, mercenary soldiers, and ordinary farmers traded and clashed across a landscape of constant, often violent, change—and how these dramatic moments, though largely lost to memory, helped to shape the very world around us. From the founding of the first permanent European settlement in North America (1565) to the bloody chaos of the British frontier in Pontiac's War (1763), this vividly written

narrative spans the two centuries of American history before the Revolutionary War. These lesser-known conflicts of the past are brought brilliantly to life, showing us a world of heroism, brutality, and tenacity—and also showing us how deep the roots of our own time truly run. Illustrated with more than 100 archival images.

Professionals, faculty, and students are aware of the pressing need to integrate ecological principles into environmental design and planning education, but few materials exist to facilitate that development. Ecology and Design addresses that shortcoming by articulating priorities and approaches for incorporating ecological principles in the teaching of landscape design and planning. The book explains why landscape architecture and design and planning faculty should include ecology as a standard part of their courses and curricula, provides insights on how that can be done, and offers models from successful programs. The book: examines the need for change in the education and practice of landscape architecture and in the physical planning and design professions as a whole asks what designers and physical planners need to know about ecology and what applied ecologists can learn from design and planning

In the late nineteenth and early twentieth centuries, indigenous communities in the United States and Australia suffered a common experience at the hands of state authorities: the removal of their children to institutions in the name of assimilating American Indians and protecting Aboriginal people. Although officially characterized as benevolent, these government policies often inflicted great trauma on indigenous families and ultimately served the settler nations' larger goals of consolidating control over indigenous peoples and their lands. *White Mother to a Dark Race* takes the study of indigenous education and acculturation in new directions in its examination of the key roles white women played in these policies of indigenous child-removal. Government officials, missionaries, and reformers justified the removal of indigenous children in particularly gendered ways by focusing on the supposed deficiencies of indigenous mothers, the alleged barbarity of indigenous men, and the lack of a patriarchal nuclear family. Often they deemed white women the most appropriate agents to carry out these child-removal policies. Inspired by the maternalist movement of the era, many white women were eager to serve as surrogate mothers to indigenous children and

maneuvered to influence public policy affecting indigenous people. Although some white women developed caring relationships with indigenous children and others became critical of government policies, many became hopelessly ensnared in this insidious colonial policy.

Politicians and pundits often scorn polarization and compromise—the intransigence of the former and the feebleness of the latter—without suggesting an alternative way. Polarization, when opposing forces are equal or close to equal in strength, leads to stalemate. Compromise threatens to betray one's conviction about what is essential. Ideally, a leader must combine conviction about what ought to be done with an open-minded awareness of unintended consequences. The social sciences are or should be based, largely, on the premise that people are historical and social beings. Holding the Center follows this tradition, while focusing on the trimming aspect. In nautical terms, trimming indicates an adjustment of one's vessel to accommodate one's environment. In politics, it is to find common ground between extremes, not for the sake of compromise, but because reason does not have a single location on the political spectrum. The twelve chapters in this book are brought together by Goodheart's argument that the Whig trimming tradition is the heart and soul of politics in the West, and that both democracy and democratic culture depend upon the trimming tradition's advocacy of toleration. What is needed now, he notes, is a transformation in our political culture in which humility and the admission of error enter the list of political

virtues. Non-parliamentary democracy with its separation of powers depends for its proper functioning on compromise, especially in a time like ours of crisis and divided government.

Geography's mission is to comprehend changes on the earth's surface, and toward that end, geographers ponder the interactive effects of nature and culture within specific locations and times. This entails connecting human actions (historical events) with their immediate environs (ecological inquiry) and specific coordinates of place and region (locational inquiry). Most of the essays in this volume employ the variant of ecological inquiry the author calls the staple approach, focusing on primary production (agriculture, forestry, fishing) and its societal ramifications. Locational inquiry queries the spatial distribution of historical events: Why was mortality in early Virginia highest in a small zone along the James River? Why did cities flourish in early Pennsylvania, Massachusetts, and Carolina and not elsewhere along the Atlantic seaboard? Why was Boston the vanguard of the American Revolution?

In 2007 the United Nations approved the United Nations Declaration on the Rights of Indigenous Peoples. United States endorsement in 2010 ushered in a new era of Indian law and policy. This book highlights steps that the United States, as well as other nations, must take to provide a more just society and heal past injustices committed against indigenous peoples.

imaginative - using moral imagination above all - and even-handed. The first of three volumes of the landmark, award-winning series *The Europeans in Australia* gives an account of early settlement by Britain. It tells of the political and intellectual origins of this extraordinary undertaking that began during the 1780s, a decade of extraordinary creativity and the climax of the European Enlightenment. Volume One, *The Beginning*, examines the forces that led to the penal colony at Port Jackson and the first twenty-five years of white settlement. Atkinson examines, as few historians have done before, the political and intellectual origins of this extraordinary undertaking. It began during the 1780s, a decade of extraordinary creativity and the climax of the European Enlightenment. The purpose of settlement might seem uninspiring, but the fact that this was to be a community of convicts and ex-convicts raised profound questions about the common rights of the subject, the responsibility of power, and the possibility of imaginative attachment to a land of exile. Atkinson explores the imagery and technique of European power as it made its first impact on Australia. He argues that the Europeans were not simply conquerors motivated by brutal or short-term colonising imperatives. The Europeans' culture was ancient and infinitely complex, thickly woven with ideas about spirituality, authority, self, and land, all of which influenced the development of Australia. The possession of land and

conflict with Aboriginal peoples were at issue, but so were the ancient habits of Europeans themselves. The culmination of an extraordinary career in the writing and teaching of Australian history, *The Europeans in Australia* grapples with the Australian historical experience as a whole from the point of view of the settlers from Europe. Ambitious and unique, it is the first such large, single-author account since Manning Clark's *A History of Australia*.

This book explores the changes that are leading to a new century of natural resources management. It places the current situation in historical perspective, analyzes the forces that are propelling change, and describes and examines the specific changes in goals, policy, and practice that are transforming all aspects of natural resources management. The book is an important overview for wildlife biologists, foresters, and others working for public land agencies; professors and students of natural resources; and all those whose livelihood depends on the use of public natural resources.

This innovative interdisciplinary study offers a comprehensive analysis of the French, Dutch and English colonization of northeastern North America during the early and middle decades of the seventeenth century. It is the first book to pay serious attention to the European economic and political factors which promoted colonization, and it argues that the prime determinant was the uneven development of agricultural systems in western Europe.

isolate Muslim learners, impose dogmatic religious views, and disregard academic excellence. This book attempts to paint a starkly different picture. Grounded in the premise that not all Islamic schools are the same, the historical narratives illustrate varied visions and approaches to Islamic schooling that showcase a richness of educational thought and aspiration. *A History of Islamic Schooling in North America* traces the growth and evolution of elementary and secondary private Islamic schools in Canada and the United States. Intersecting narratives between schools established by indigenous African American Muslims as early as the 1930s with those established by immigrant Muslim communities in the 1970s demonstrate how and why Islamic Education is in a constant, ongoing process of evolution, renewal, and adaptation. Drawing on the voices, perspectives, and narratives of pioneers and visionaries who established the earliest Islamic schools, chapters articulate why Islamic schools were established, what distinguishes them from one another, and why they continue to be important. This book will be of great interest to graduate and postgraduate students, researchers, academics, teaching professionals in the fields of Islamic education, religious studies, multicultural education curriculum studies, and faith-based teacher education.

This groundbreaking volume offers a fresh approach to conceptualizing the

historical geography of North America by taking a thematic rather than a traditional regional perspective. Leading geographers, building on current scholarship in the field, explore five central themes. Part I explores the settling and resettling of the continent through the experiences of Native Americans, early European arrivals, and Africans. Part II examines nineteenth-century European immigrants, the reconfiguration of Native society, and the internal migration of African Americans. Part III considers human transformations of the natural landscape in carving out a transportation network, replumbing waterways, extracting timber and minerals, preserving wilderness, and protecting wildlife. Part IV focuses on human landscapes, blending discussions of the visible imprint of society and distinctive approaches to interpreting these features. The authors discuss survey systems, regional landscapes, and tourist and mythic landscapes as well as the role of race, gender, and photographic representation in shaping our understanding of past landscapes. Part V follows the urban impulse in an analysis of the development of the mercantile city, nineteenth- and twentieth-century planning, and environmental justice. With its focus on human-environment interactions, the mobility of people, and growing urbanization, this thoughtful text will give students a uniquely geographical way to understand North American history.
