frequent layout of a Sudoku puzzle is a 9 x 9 grid that is made of subgrids that are 3 x 3. Each of these subgrids is known as a "region". Depending on how easy or hard the puzzle is there will be various starting numbers in the cells. These are known as the "givens". Every row, column, and region of the Sudoku puzzle can contain only one instance of each number. You complete the puzzle when all of the cells have been filled in with corresponding numbers. To complete the Sudoku puzzle requires a lot of patience as well as the ability to think logically. The basic layout of the Sudoku grid is much like a chess game or crossword puzzles. Sudoku is not just a mathematical or arithmetic type of puzzle. It works just as well if the numbers are substituted with letters or other symbols. However, the numbers work best. The bottom line is that Sudoku is a fascinating new puzzle game that has taken the world by surprise and storm. You can now find Sudoku in many national newspapers. The great thing about this puzzle is that the basic principle of solving it is really quite simple. All you need to do is fill in the grid in such a way that each row, column, and region contains the numbers one to nine. Mathematician and bestselling author Robin Wilson--himself a sudoku aficionado--offers 52 tried and tested tips and tactics for solving these brainteasers. Here it comes: a revolution in sudoku solving! This is by far the most complete guide to cracking these addictive puzzles ever produced, with tricks even the experts won't know. While most books might have a few pages of introduction before proceeding straight to the sudokus, this one covers it all: hidden pairs, naked pairs, X-wings,

The objective is to fill a 9x9 grid with digits in such a way that each column, each row, and each of the nine 3x3 grids that make up the larger 9x9 grid contains all of the digits from 1 to 9. Each Sudoku puzzle begins with some cells filled in. The player uses these seed numbers as a launching point toward finding the unique solution. It is important to stress the fact that no number from 1 to 9 can be repeated in any row or column (although, they can be repeated along the diagonals). What Defines a True Sudoku Puzzle? For a puzzle to be a true Sudoku puzzle, it can have one (and only one) solution. There can be no ambiguity in Sudoku. Each number has a single location it must reside in. Otherwise, the player is forced to guess which location to choose thus changing the puzzle into a game of chance. Sudoku Puzzle Variants There are many variations on Sudoku including Mini Sudoku, Cross Sums Sudoku, Killer Sudoku, and Wordoku. We will not cover such variations here.
