This text compares the economic theory of the early neoclassical economists with the theory of value of the post-World War II period, and in particular the Arrow-Debreu model of general equilibrium. It argues that many of the problems faced in the early part of the century, that led in many cases to revolutions in the 1930s and 40s, have not been successfully resolved by later theoretical work.

During the years between 1964 and 1977 the Group met eighteen times and made a series of recommendations for policymakers. *Microeconomics: A Modern Treatment* focuses on modern approaches to microeconomics. Alternative systems are discussed including input-output analysis as against neoclassical production theory. EBOOK: Economics, 12e

Designed for one-semester use, this innovative, principles-level text takes a broad 'contextual' approach to economics - including serious consideration of ecological, feminist, and social concerns - while still including coverage of the standard microeconomic concepts and models. Unlike most microeconomics textbooks, which focus exclusively on markets and efficiency, this book starts with the question of human well-being and then examines how economic activities can contribute to, or detract from, well-being. It addresses such critical concerns as ecological sustainability, distributional equality, the quality of employment, and the adequacy of living standards. Like its companion volume, "Macroeconomics in Context," this text includes discussions of historical, institutional, political, and social factors that encourage students to engage with the subject matter. An Instructor's Resource Manual, Test Bank, and Student Study Guide are available on the authors' website for instructors who adopt the text.

Microeconomics in Context lays out the principles of microeconomics in a manner that is thorough, up to date, and relevant to students. Like its counterpart, Macroeconomics in Context, the book is uniquely attuned to economic realities. The "in Context" books offer affordability, accessible presentation, and engaging coverage of current policy issues from economic inequality and global climate change to taxes. Key features include: --Clear explanation of basic concepts and analytical tools, with advanced models presented in optional chapter appendices; --Presentation of policy issues in historical, institutional, social, political, and ethical context--an approach that fosters critical evaluation of the standard microeconomic models, such as welfare analysis, labor markets, and market competition; --A powerful graphical presentation of various measures of well-being in the United States, from income inequality and educational attainment to home prices; --Broad definition of well-being using both traditional economic metrics and factors such as environmental quality, health, equity, and political inclusion; --New chapters on the economics of the environment, taxes and tax policy, common property and public goods, and welfare analysis; --Expanded coverage of high-interest topics such as behavioral economics, labor markets, and healthcare; --Full complement of instructor and student support materials online, including test banks and grading through Canvas.

Growth momentum in sub-Saharan Africa remains fragile, marking a break from the rapid expansion witnessed since the turn of the millennium. 2016 was a difficult year for many countries, with regional growth dipping to 1.4 percent—the lowest level of growth in more than two decades. Most oil exporters were in recession, and conditions in other resource-intensive countries remained difficult. Other nonresource-intensive countries however, continued to grow robustly. A modest recovery in growth of about 2.6 percent is expected in 2017, but this falls short of past trends and is too low to put sub-Saharan Africa back on a path of rising living standards. While sub-Saharan Africa remains a region with tremendous growth potential, the deterioration in the overall outlook partly reflects insufficient policy adjustment. In that context, and to reap this potential, strong and sound domestic policy measures are needed to restart the growth engine.

Classical microeconomics is intended to explain how a price system is able to coordinate the economic agents. But even if it can be extended to incomplete information and externalities, it remains grounded on very heroic assumptions. Agents are endowed with a very strong rationality, equilibrium is stated without a concrete process to achieve it, market is the unique institution considered. Evolutionary microeconomics is aimed at bypassing these limitations by considering a dynamic approach, however not biologically oriented. Agents have local information and bounded rationality, they are involved in explicit processes of interactions through time, various institutions sustain the market or substitute to it. It explains then some phenomena hardly explained by classical microeconomics: dispersion of prices, variety of industrial structures, financial bubbles.
