This book showcases cutting-edge research papers from the 6th International Conference on Research into Design (ICoRD 2017) – the largest in India in this area – written by eminent researchers from across the world on design process, technologies, methods and tools, and their impact on innovation, for supporting design for communities. While design traditionally focused on the development of products for the individual, the emerging consensus on working towards a more sustainable world demands greater attention to designing for and with communities, so as to promote their sustenance and harmony - within each community and across communities. The special features of the book are the insights into the product and system innovation process, and the host of methods and tools from all major areas of design research for the enhancement of the innovation process. The main benefit of the book for researchers in various areas of design and innovation are access to the latest quality research in this area, with the largest collection of research from India. For practitioners and educators, it is exposure to an empirically validated suite of theories, models, methods and tools that can be taught and practiced for design-led innovation. The contents of this volume will be of use to researchers and professionals working in the areas on industrial design, manufacturing, consumer goods, and industrial management.

injury, and cell death; reveals how many drugs work through the calcium signaling system; and demonstrates how intracellular calcium is involved in the action of many natural toxins. The book also illustrates how the intracellular calcium signaling system has evolved over millions of years, showing why it was crucial to the origin of life. Additionally, the book promotes the importance of the molecular variation upon which the intracellular calcium signalling system depends. Featuring more than 100 figures (including detailed chemical structures as well as pictures of key pioneers in the field), a bibliography of some 1000 references, and a detailed subject index, this definitive work provides a unique source of scholarship for teachers and researchers in the biomedical sciences and beyond. Emphasizes two key scientific principles—the first to show how intracellular Ca^{2+} acts as a switch, to activate a wide range of cellular events, and the second demonstrating how an analogue mechanism can be superimposed on such a process. Written by an internationally recognized expert in the field. Filled with images and references to facilitate learning. *Fundamentals of Intracellular Calcium* is an all-important text for post-graduate students and researchers working in biomedicine and biochemistry. It is also essential for undergraduate lecturers and their students in physiology, medicine, pharmacy, and the biosciences.

A Very Human Future is written from the premise that the pace of penetration and scale of disruption of new technologies requires us to adopt a new all-encompassing protective logic for society moving forward. Enriching Humanity in a Digitized World means placing humanity at the center of the agenda so that we avoid dehumanizing ourselves and future generations. As society enters the fourth industrial revolution, a major question arises—can we harness intense technological bursts of possibility to bring about a better world? A Very Human Future illustrates how the evolution of society, cities, people, businesses, industries, nations, and governments are being unexpectedly entangled by exponential technological disruption. This is not a book about technology but an exploration of how we make it serve humanity's highest needs and ambitions. Each chapter looks at how new ideas enabled by emerging technologies are

straining the old social fabric, and proposes radical future scenarios, strategies, and actions to safeguard humanity from harm and enhance opportunity for all. This book is a manifesto for a future that is better than the past. A Very Human Future rejects an outlook where human beings live a mundane existence while technologies burst with possibility. Rather, we use this book to endorse a proactive approach to the future where technology is designed to benefit humanity purposefully and intentionally. To advocate for A Very Human Future we ask, for example, how do we use technology to overcome gender bias or to impart a meaningful education to new generations? Can artificial intelligence tools make government more trustworthy and help us deal with the impacts of automation replacing humans? What rights should people have when residing in smart cities? The scale of the new technologies requires a protective logic for moving forward, keeping humanity at the centre so that we avoid dehumanizing ourselves and future generations. A Very Human Future is not one, but many: positive stories and visions of the future can be powerful beacons for social adaptation. We argue that the time to control the narrative of the future and stake a claim for humanity is now. A Very Human Future uses knowledge as power, describing surprising ways new thinking and disruptive technology can impact society. This book explains that protecting what's human is the key to retaining our dominance over future technological progress.

A companion to Bloomsbury's popular two-volume Greek to GCSE, this is the first course for Latin students that directly reflects the curriculum in a clear, concise and accessible way. Enhanced by colour artwork and text features, the books support the new OCR specification for Latin (first teaching 2016) as well as meeting the needs of later students, both at university and beyond. Written by two experienced school teachers, one also an examiner, the course is based on a keen understanding of what pupils find difficult, concentrating on the essentials and on the explanation of principles in both accidence and syntax: minor irregularities are postponed and subordinated so that the need for rote learning is reduced. User-friendly, it also gives pupils a firm foundation for further study. Part 1 covers the basics and is self-contained, with its own reference section. It outlines the main declensions, a range of active tenses and a vocabulary of 275 Latin words to be learned. Pupil confidence is built up by constant consolidation of the material covered. After the preliminaries, each chapter concentrates on stories with one source or subject: the Fall of Troy, the journeys of Aeneas, the founding of Rome and the early kings, providing an excellent introduction to Roman culture alongside the language study.
