1981- in 2 v.: v.1, Subject index; v.2, Title index, Publisher/title index, Association name index, Acronym index, Key to publishers' and distributors' abbreviations. For two decades, I have been responding to questions about the nature of health psychology and how it differs from medical psychology, behavioral medicine, and clinical psychology. From the beginning, I have taken the position that any application of psychological theory or practice to problems and issues of the health system is health psychology. I have repeatedly used an analogy to Newell and Simon's "General Problem Solver" program of the late 1950s and early 1960s, which had two major functional parts, in addition to the "executive" component. One was the "problem-solving core" (the procedural competence); the other was the representation of the "problem environment." In the analogy, the concepts, knowledge, and techniques of psychology constitute the core competence; the health system in all its complexity is the problem environment. A health psychologist is one whose basic competence in psychology is augmented by a working knowledge of some aspect of the health system. Quite apparently, there are functionally distinct aspects of health psychology to the degree that there are meaningful subdivisions in psychological competence and significantly different microenvironments within the health system. I hesitate to refer to them as areas of specialization, as the man who gave health psychology its formal definition, Joseph Matarazzo, has said that

there are no specialties in psychology (cited in the editors' preface to this book).

Multiple Regression and Beyond offers a conceptually-oriented introduction to multiple regression (MR) analysis and structural equation modeling (SEM), along with analyses that flow naturally from those methods. By focusing on the concepts and purposes of MR and related methods, rather than the derivation and calculation of formulae, this book introduces material to students more clearly, and in a less threatening way. In addition to illuminating content necessary for coursework, the accessibility of this approach means students are more likely to be able to conduct research using MR or SEM--and more likely to use the methods wisely. This book:

- Covers both MR and SEM, while explaining their relevance to one another
- Includes path

This first-ever study of rape in modern American drama examines portrayals of rape, raped women and rapists in 36 plays written between 1970 and 2007, the period during which the feminist movement made rape a matter of public discourse. These dramas reveal much about sexuality and masculine and feminine identity in the United States. The author traces the impact of second-wave feminism, antifeminist backlash, third-wave feminism and postfeminism on the dramatic depiction of rape. The prevalence of

commonly accepted rape myths--that women who dress provocatively invite sexual assault, for example--is well documented, along with equally frequent examples which dispute these myths.

This fourth edition of the first true textbook on the death penalty engages the reader with a full account of the arguments and issues surrounding capital punishment. The book begins with the history of the death penalty from colonial to modern times, and then examines the moral and legal arguments for and against capital punishment. It also provides an overview of major Supreme Court decisions and describes the legal process behind the death penalty. In addressing these issues, the author reviews recent developments in death penalty law and procedure, including ramifications of newer case law, such as that regarding using lethal injection as a method of execution. The author's motivation has been to understand what motivates the "deathquest" of the American people, leading a large percentage of the public to support the death penalty. The book will educate readers so that whatever their death penalty opinions are, they are informed ones.

Early Thoughts on Creating Comprehensive Trauma Centers
This volume has been many years in writing. When Dr. Donald Meichenbaum first suggested it and I approached my

coauthor Lasse Nurmi, it did not seem to be as formidable a task as it has become. Interviewing the centers in this book has taken years-to get responses, to summarize those responses, and to return the summaries for further comment. Many centers have been created in that time; others have suspended operation. This volume does not claim to present even a majority of those centers. However, the ones contained herein are representative of "what is out there. "

The idea to create a comprehensive trauma center is not new. The initial section of this forward examines thoughts I proposed as part of my comprehensive examination for my doctorate. Many of the ideas proposed then (1989) seem to fit now. It is my dream to put them into practice someday in the future.

THE COMPREHENSIVE EXAMINATION QUESTION

In 1989, one question on the written comprehensive examination questions for my doctorate was, "If you were to create a comprehensive trauma center in your suburban area, making use of what you have learned in your [doctoral] experience, describe the organization of that center, the mission, structure, personnel, funding, objectives, and services it would offer. " Some of the conclusions reached then now seem applicable to the task at hand: designing comprehensive trauma centers (CTCs) for the 21st century.
