Peter Gourfain emerged on the New York art scene in the 1960s showing minimalist sculpture. Since the 1980s his work has become figurative, expressionist, personal, and socially engaged. Many of Gourfain's terracotta reliefs, large-scale urns, cast bronzes, woodcarvings, prints, and paintings deliver specific messages about political and social issues, often of universal importance. Gourfain's carved homage to Michael Stewart, an African American art student from Brooklyn who died from a beating, allegedly by eleven NYPD officers, presents a tragic story with an important message. A chronicler of our times, Gourfain portrays the human struggle and makes vivid comment on social injustice in America. His 1994 large-scale bronze sculpture "Powerful Days" features images from milestones in African American history. His dramatic narratives also often weave in themes and songs from the work of James Joyce, exemplified by the 1990 woodblock print "Finnegan's Wake." Trained at the School of the Art Institute of Chicago, Gourfain has exhibited his work at the Brooklyn Museum, Guggenheim Museum, Museum of Modern Art, and the Jewish Museum in New York, among others. The Elvehjem (now Chazen) Museum's exhibition is the first major showing of Gourfain's work since a presentation at the Brooklyn Museum in 1987. Distributed for the Chazen Museum of Art, University of Wisconsin–Madison

Ecological roots of our troubled time are deeper than its economic manifestations. Anguished posterity will look back on this 21st century as the bottleneck century. Bottleneck: Humanity's Impending Impasse was written to show how and why three converging trends have put humankind in much deeper peril than is generally acknowledged. First, there are many more of us inhabiting this planet than it can sustain. Second, technological advances of recent centuries have made gigantic and prodigal our per capita resource appetites and our per capita environmental impacts. Third, even though, as the symbol-using species, we humans conceivably could do better at anticipating future circumstances and planning ahead, our evolutionary heritage together with unanticipated dysfunctions of modern division of labor have kept us too preoccupied with short-term concerns. People today are dependent upon a fantastically intricate web of exchange relations (the market). Even when functioning normally and not in a collapsed condition, as currently this system of relations has a serious and pervasive dehumanizing effect not adequately discerned by economists nor sociologists. Recognition of and adequate adaptation to the deteriorating ecological context of human life has been impeded. Human societies (even our own) are almost certainly going to act in ways that will make an inevitably difficult future unnecessarily worse. Factors analyzed in this book have made people seriously averse to the kind and extent of cooperation our difficult future will require. Together with the basic trio of disturbing trends humans having become so numerous, so ravenous, and so short-sighted this has made the nature of today's human prospect far more dire than most policymakers dare admit. It tempts even the wisest and most civic-minded to seek or promote remedial policies that will worsen the real predicament.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.
