The transition to adulthood involves, for most individuals, moving from school to work, establishment of long-term relationships, possibly parenting, and a number of other psychosocial transformations. Now more than ever, there is a concern within popular and research literature about children growing up too soon or too late or failing to realize changes associated with being adult. With this in mind, the book intends to answer a series of timely questions in regard to transition to adulthood and propose a wholly new approach to counseling that enables youth to engage fully in their lives and achieve their best. Active Transition to Adulthood: A New Approach for Counseling will discuss the authors' work on the transition to adulthood (including early and late adolescence) from an entirely innovative perspective – action theory. Over a period of 10-15 years the authors have collected substantial data on adolescents and youth in transition, and will present an approach to counseling based on these data and cases. The action theory perspective in which the authors have grounded their work addresses the intentional, goal-directed behavior of persons and groups that is expressed through particular actions, longer-term projects, and life-encompassing careers. In this book, both transition to adulthood and counseling will be covered in the language of goal-directed action. In this way both transition and counseling reflect and capture the action, projects, and careers in which families, youth, and clients are engaged and use to construct on-going identity and other narratives.

Among the many different approaches to "templating" with Perl--such as Embperl, Mason, HTML::Template, and hundreds of other lesser known systems--the Template Toolkit is widely recognized as one of the most versatile. Like other templating systems, the Template Toolkit allows programmers to embed Perl code and custom macros into HTML documents in order to create customized documents on the fly. But unlike the others, the Template Toolkit is as facile at producing HTML as it is at producing XML, PDF, or any other output format. And because it has its own simple templating language, templates can be written and edited by people who don't know Perl. In short, the Template Toolkit combines the best features of its competitors, with ease-of-use and flexibility, resulting in a technology that's fast, powerful and extensible, and ideally suited to the production and maintenance of web content and other dynamic document systems. In Perl Template Toolkit you'll find detailed coverage of this increasingly popular technology. Written by core members of the technology's development team, the book guides you through the entire process of installing, configuring, using, and extending the Template Toolkit. It begins with a fast-paced but thorough tutorial on building web content with the Template Toolkit, and then walks you through generating and using data files, particularly with XML. It also provides detailed information on the Template Toolkit's modules, libraries, and tools in addition to a complete reference manual. Topics in the book include: Getting started with the template toolkit The Template language Template directives Filters Plugins Extending the Template Toolkit Accessing databases XML Advanced static web page techniques Dynamic web content and web applications The only book to cover this important tool, Perl Template Toolkit is essential reading for any Perl programmer who wants to create dynamic web content that is remarkably easy to maintain. This book is your surefire guide to implementing this fast, flexible, and powerful templating system.

The first edition of the Code of Practice for Project Management for Construction and Development, published in 1992, was groundbreaking in many ways. Now in its fifth edition, prepared by a multi-institute task force coordinated by the CIOB and including representatives from RICS, RIBA, ICE, APM and CIC, it continues to be the authoritative guide and reference to the principles and practice of project management in construction and development. Good project management in construction relies on balancing the key constraints of time, quality and cost in the context of building functionality and the requirements for sustainability within the built environment. Thoroughly updated and restructured to reflect the challenges that the industry faces today, this edition continues to drive forward the practice of construction project management. The principles of strategic planning, detailed programming and monitoring, resource allocation and effective risk management, widely used on projects of all sizes and complexity, are all fully covered. The integration of Building Information Modelling at each stage of the project life is a feature of this edition. In addition, the impact of trends and developments such as the internationalisation of construction projects and the drive for sustainability are discussed in context. Code of Practice will be of particular value to clients, project management professionals and students of construction, as well as to the wider construction and development industries. Much of the information will also be relevant to project management professionals operating in other commercial spheres.

Responsibility for planning language teaching programs now carries with it a strong element of accountability. Evaluation of the whole process of course design, development, and implementation is therefore a necessary area of activity for course designers, language planners, and researchers. This book brings together accounts of recent work in this increasingly important field and will be a valuable resource both for those already engaged in evaluation and for those in training. Part One presents a review of the literature, covering past developments in the wider field of educational evaluation, as well as specifically in second language education. Part Two contains a series of eight original case-studies, written by scholars involved in evaluations in widely divergent settings. The focus in each case is on how the evaluator addresses the difficulties central to each study, and the findings are also included. The final Part Three provides practical guidance for evaluators, offering suggestions about how to set up and carry out evaluations in any given setting.

The Author has been creating Visual Basic Programs for Options Trading while living in Spain starting in 1990. Your Author decided to write this book based on his writing new Options Trading programs using the most up to date Visual Pasic downloaded from the Visual Basic Website & Java. The downloads from Microsoft & Java are free of charge. The first sections explain the steps I had to take to use Visual Basic Express & Java Programming & the Java Platform to supplement the information in the Help section. I will give three examples of possible uses of Visual Basic. One Example is a program that allows you to use my latest Options Trading software for trading OEX Weekly Options which were first introduced in the CBOE on 28 October 2005. I adapted my OEX options trading strategies to use these weekly options. I use the realtime quotes from DTN.IQ & the free delayed quotes from CBOE for the programs. The second section explains how to use Visual Basic Express to prepare a PDF book document ready to submit to BookSurge/CreateSpace, subsidiary of Amazon.com & to Google Books Partner Program. The example can be. easily adapted to fit any POD publisher's format. The third example is totally different: how to win the TransPac Yacht Race from Los Angeles to Honolulu.
