Disability evaluations are the most common clinical mental health evaluations conducted for nontreatment purposes. They place mental health professionals in the role of communicating information that is typically confidential to administrative and legal systems. Unfortunately,

mental health professionals receive little to no training in conducting assessments that focus on disability and disability management, and often do not understand the implications and risks of providing this information, especially without conducting what are often specialized evaluations. Clinical Guide to Mental Health Disability Evaluations is geared for general mental health practitioners, providing them with the basic information needed to competently provide the various types of disability evaluations. It also provides enough information to inform forensic mental health providers in conducting more specialized evaluations.

This book is a comprehensive analysis of the definitions, concepts, and recent research on malingering, feigning, and other response biases in psychological injury/ forensic disability populations. It presents a new model of malingering and related biases, and develops a "diagnostic" system based on it that is applicable to PTSD, chronic pain, and TBI. Included are suggestions for effective practice and future research based on the literature reviews and the new systems, which are useful also because they can be used readily by psychiatrists as much as psychologists. In Malingering, Feigning, and Response Style Assessment in Psychiatric/Psychological Injury, Dr. Young ambitiously sets out to articulate and synthesize the polarities involved in the assessment of response styles in psychological disabilities, including PTSD, pain, and TBI. He does so thoroughly and very even-handedly, neither minimizing the degree that outright faking can be found in substantial numbers of examinees, nor disregarding the possibility that there can be causes for validity test failure other than malingering. He reviews the prior systems for classifying evidence of malingering, and proposes his own criteria for feigned PTSD. These are conservative and well-grounded in the prior literature. Finally, the book contains dozens of very recent references, giving testament to Dr. Young's immersion in the personal injury literature, as might be expected from his experience as founder and Editor in Chief for Psychological Injury and the Law. Reviewer: Steve Rubenzer, Ph.D., ABPP Board Certified Forensic Psychologist

Les professionnels impliqués dans la prescription ou la vente de lentilles de contact (ou lentilles cornéennes) constatent, au quotidien, en fonction du type de lentilles choisies et de leur entretien, que le port de lentilles cornéennes peut entraîner des sensations d'inconfort ainsi que des atteintes de la santé oculaire, parfois bénins, parfois plus sérieux. Quelle est la meilleure solution d'entretien pour améliorer l'expérience du porteur de lentilles de contact ? Quel mode de port doit-on privilégier ? Quelles sont les meilleures pratiques pouvant assurer une plus grande sécurité ? Quels sont les facteurs importants à considérer pour éviter le développement d'infection ou d'inflammation à la suite du port de lentilles ? Qui est à risque ? Ce sont ces thèmes que développe l'ouvrage Les lentilles de contact. Optimisation de l'adaptation, utilisation et entretien. Après une présentation de l'évolution des matériaux composant les lentilles, l'auteur présente les solutions d'entretien et de conservation des lentilles de contact avec leurs différents agents, et leur mode d'utilisation. La présence de lentilles de contact sur l'œil n'est pas anodine et tous les professionnels ou prescripteurs délivrant des produits et des lentilles de contact doivent veiller à réduire les risques d'infection au maximum. Si toutefois des complications surviennent, l'auteur propose une conduite à suivre. Ce livre expose les recommandations et les gestes au quotidien que le porteur de lentilles doit respecter : de la pose de la lentille à son retrait, son entretien, sa conservation pour la nuit. Les lentilles de contact. Optimisation de l'adaptation, utilisation et entretien s'adresse à tous les professionnels de la vision (ophtalmologistes, opticiens, étudiants en optométrie, orthoptistes, enseignants...) ainsi qu'aux porteurs de lentilles désireux de conseils pratiques dans le choix et l'entretien des lentilles de contact.

Bekenntnisse eines Hirnchirurgen Wie arbeitet ein Hirnchirurg? Wie fühlt es sich an, in das Organ zu schneiden, mit dem Menschen denken und träumen? Wie geht man damit um, wenn das Leben eines Patienten von der eigenen Heilkunst abhängt? Und wie, wenn man scheitert? Mehr noch als in anderen Bereichen der Medizin ist es in der Hirnchirurgie so gut wie unmöglich, nie einem Patienten zu schaden, denn Operationen am Innersten des Menschen sind immer mit unkalkulierbaren Risiken verbunden. Henry Marsh, einer der besten Neurochirurgen Großbritanniens, erzählt beeindruckend offen, selbstkritisch und humorvoll von den Ausnahmesituationen, die seinen Arbeitsalltag ausmachen. Seine Geschichten handeln vom Heilen und Helfen, vom Hoffen und Scheitern, von fatalen Fehlern und von der Schwierigkeit, die richtige Entscheidung zu treffen.
