How the Chicago School Overshot the Mark is about the rise and recent fall of American antitrust. It is a collection of 15 essays, almost all expressing a deep concern that conservative economic analysis is leading judges and enforcement officials toward an approach that will ultimately harm consumer welfare. For the past 40 years or so, U.S. antitrust has been dominated intellectually by an unusually conservative style of economic analysis. Its advocates, often referred to as "The Chicago School," argue that the free market (better than any unelected band of regulators) can do a better job of achieving efficiency and encouraging innovation than intrusive regulation. The cutting edge of Chicago School doctrine originated in academia and was popularized in books by brilliant and innovative law professors like Robert Bork and Richard Posner. Oddly, a response to that kind of conservative doctrine may be put together through collections of scores of articles but until now cannot be found in any one book. This collection of essays is designed in part to remedy that situation. The chapters in this book were written by academics, former law enforcers, private sector defense lawyers, Republicans and Democrats, representatives of the left, right and center. Virtually all agree that antitrust enforcement today is better as a result of conservative analysis, but virtually all also agree that there

have been examples of extreme interpretations and misinterpretations of conservative economic theory that have led American antitrust in the wrong direction. The problem is not with conservative economic analysis but with those portions of that analysis that have "overshot the mark" producing an enforcement approach that is exceptionally generous to the private sector. If the scores of practices that traditionally have been regarded as anticompetitive are ignored, or not subjected to vigorous enforcement, prices will be higher, quality of products lower, and innovation diminished. In the end consumers will pay.

come into its own. It builds on the work of text analysis which has a long and distinguished history, but modern developments in psychology (e.g. memory research), artificial intelligence, linguistics and philosophy have contributed to this emergence in the last decade as a lively and promising research area. This book contains 46 selected and edited contributions from the International Symposium held in Fribourg in 1981, and represents a truly international overview of the developments in research on written and oral discourse. The contributions have been grouped according to problem area and not according to methodology, with the intention of focusing on the important issues in the field of discourse processing and of showing how diverse approaches contribute to a better understanding of the problems involved. The main themes are: text structure, coherence, inference, memory processes, attention and control, goal perspectives, and educational implications.

Our ability to make choices is fundamental to our sense of ourselves as human beings, and essential to the political values of freedom-protecting nations. Whom we love; where we work; how we spend our time; what we buy; such choices define us in the eyes of ourselves and others, and much blood and ink has been spilt to establish and protect our rights to make them freely. Choice can also be a burden. Our cognitive capacity to research and make the best decisions is limited, so every active choice comes at a cost. In modern life the requirement to make active choices can often be overwhelming. So, across broad areas of our lives, from health plans to energy suppliers, many of us choose not to choose. By following our default options, we save ourselves the costs of making active choices. By setting those options, governments and corporations dictate the outcomes for when we decide by default. This is among the most significant ways in which they effect social change, yet we are just beginning to understand the power and impact of default rules. Many central questions remain unanswered: When should governments set such defaults, and when should they insist on active choices? How should such defaults be made? What makes some defaults successful while others fail? Cass R. Sunstein has long been at the forefront of developing public policy and regulation to use government power to encourage people to make better decisions. In this major new book, *Choosing Not to Choose*, he presents his most complete argument yet for how we should understand the value of choice, and when and how we should enable people to choose not to choose. The onset of big data gives corporations and governments the power to make ever more sophisticated decisions on our behalf, defaulting us to buy the goods we predictably want, or vote for the parties and policies we predictably support. As consumers we are starting to embrace the benefits this can bring. But should we? What will

be the long-term effects of limiting our active choices on our agency? And can such personalized defaults be imported from the marketplace to politics and the law? Confronting the challenging future of data-driven decision-making, Sunstein presents a manifesto for how personalized defaults should be used to enhance, rather than restrict, our freedom and well-being.

R. H. Tawney believed that the subject of economic history raises questions which touch the fundamental concerns of all thinking people. By setting economic development firmly within the framework of cultural and political life, he provided an alternative to the recent fragmentation of economic history into a number of increasingly technical specialisms. First published as a collection in 1978, these ten essays, spanning the length of Professor Tawney's career remain as controversial and potent as ever, and the original introduction by J. M. Winter provides the first full evaluation and significance of R. H. Tawney's approach to economic history. Among the essays included in this volume are the indispensable studies of 'The Rise of the Gentry' and 'Harrington's Interpretation of His Age', as well as 'The Abolition of Economic Controls, 1918-1921', here published in full for the first time. Other selections, such as Tawney's celebrated inaugural lecture as Professor of Economic History at the London School of Economics in 1933, 'the

Study of Economic History', offer a representative sample of the range and sweep of Tawney's historical imagination. Taken together, these essays demonstrate the validity of Tawney's conviction that economic historians must confront not only the creation of wealth, but also the moral questions surrounding its distribution. In the early 1950s, a young Harvard professor named Henry Kissinger approached the FBI with alleged evidence of communist subversion among the foreign students of his summer seminar. His evidence was a flyer criticizing the nuclear arms build-up and promoting world peace. At the same time at Yale, young William F. Buckley, Jr., was discovering more than God while writing *God and Man* at Yale as an undergraduate. He was discovering J. Edgar Hoover. These are just two examples of how ambitious young men used the "special relationship" developing between the FBI and the universities to advance their fledgling careers. Revelations such as these abound in Sigmund Diamond's *Compromised Campus*, an eye-opening look at the role American intelligence agencies played at some of America's most prestigious universities. It is often said that in the 1950s, American universities were free of the McCarthyism that pervaded the rest of the nation. Not so, says Diamond. Using previously secret materials newly made available under the Freedom of Information Act, and an impressive amount of information gained from years of research in university and foundation archives, he reveals that despite academia's "official story" of autonomy from the federal government, in fact university administrators, faculty, and students secretly and actively sought close ties with intelligence agencies. Diamond describes the cooperation of Harvard President James B. Conant with intelligence agencies, the institution and operation of Harvard's Russian Research Center, Yale's shadowy "liaison agent" H.B. Fisher, who moved from problems of

student drinking to cooperation with the FBI in loyalty-security matters, and the existence of formal and informal relations with the FBI and other intelligence agencies at major universities throughout the country. He calls attention to the cooperation of university presidents--Griswold of Yale, Dodds of Princeton, Wriston of Brown, Sproul of California, among others--with the FBI and state governors on the techniques of blacklisting. Diamond shows how this interaction between intelligence agencies and American universities has had serious consequences for America ever since--on foreign policy, questions of law and constitutional government, the role of secrecy, separation of public and private activities, and the existence and control of government deceit and lawlessness. Dismissed himself from Harvard in the 1950s by McGeorge Bundy (for refusing to talk to the FBI about former associates), Diamond brings a special immediacy to this revealing study.
