Technological standards are a cornerstone of the modern information economy, affecting firm strategy, market performance and, by extension, economic growth. While there is general agreement that swift movement to superior technological standards is a worthwhile goal, there is much less agreement on the central policy questions: do markets choose efficient standards? How do standards organizations affect the development of standards? And finally, what constitutes appropriate public policy toward standards? In this volume, leading researchers in public policy on standards, including both academics and industry experts, focus on these key questions. Given the

dearth of applied work on standards and public policy, this volume significantly advances the frontier of knowledge in this critical but understudied area. It will be essential reading for academic and industrial researchers as well as policymakers. Strategy, risk management and project management are often considered separately by those applying their principles—but at their most effective, all are dependent upon each other for success. Enlightened Planning teaches this holistic perspective and demonstrates how a synthesis of these approaches yields far greater opportunities. A strategic, calculated risk, for example, can be less inherently risky than chronic risk aversion over time. Here, a respected specialist and teacher demonstrates how to become an 'enlightened planner', one that is aware of project, strategy and risk concerns, and their potential interplay. Following the core principle of Keep It Simple Systematically, he shows how organised, systematic thought processes can demystify the complexities of decision-making when considering a huge variety of concerns at once. Supported throughout with real-life cases from the author's considerable experiences with commercial organisations, it is also supported by a website containing even more cases, learning and teaching materials. This book is essential reading for any practitioner specialising in risk management, project management or strategy; as well as those teachers or participants in executive programmes. Today over 40 million adults and children worldwide are infected with HIV, however knowledge of the disease has increased greatly and the prognosis is now good for

those with access to anti-retroviral treatment. For many, HIV is now a long-term chronic condition and with decreased mortality, patient requirements and disease patterns have changed, making it increasingly apparent to health care professionals that the treatment of HIV should include optimum nutrition and healthy lifestyle interventions to help sufferers lead long and healthy lives. In this essential new book an international team of authors under the editorship of Specialist HIV Dietitian Vivian Pribram bring together the latest research to provide the practicing dietitian and nutritionist with a practical guide to the nutritional care of the HIV and AIDS patient. Students and other health care professionals working and studying this area will also find Nutrition and HIV an important and valuable resource.

A compelling and compassionate case study approach to a broad range of neuropsychological disorders *Neuropsychological Assessment and Intervention for Childhood and Adolescent Disorders* focuses on the neuropsychological assessment and evidence-based practices available for assessing and treating children living with the etiological and neurological components of various disorders. Each chapter provides one or more case studies along with helpful background information, assessment results, and recommendations based on assessment data. Bridging science and practice, the book reviews the scientific literature, research on clinical implications, and evidence-based treatment of such disorders as: Dyslexia and Dyscalculia Specific Language Impairment/Dysphasia Autism Spectrum Disorders

Attention-Deficit/Hyperactivity Disorder Tourette Syndrome Traumatic Brain Injury Childhood Cancer Epilepsy Cerebrovascular Disease Low Birth Weight Environmental Toxin Exposure Neurotoxins, Pregnancy, and Subsequent Disorders Chromosomal Anomalies Neurocutaneous Disorders Metabolic Disorders Each case study complements the content of each chapter by illustrating how the assessment process can inform intervention efforts for children. In addition, the cases humanize the effects of various disorders and demonstrate the usefulness of neuropsychological information in treatment and intervention planning, especially within children's educational and social contexts.

Decisions twenty years ago during the first generation of modern traffic safety policymaking were easier than today. After all, the mandate for specific mandatory motor vehicle safety standards was derived rather clearly during legislative hearings. Since the initial standards, decisions have been based on the more general guidelines of "practicality" and avoiding "unreasonable risks." Now, with more difficult decisions pending, the demand for analysis is greater. My purpose in writing this book is to promote second generation policymaking in traffic safety. The dominant theme is that an "individual net benefit approach" is useful in the design, evaluation and improvement of traffic safety policy. Hopefully, this book provides some guidance for today's tougher decisions. Evaluative review of modern traffic safety policy, especially automobile safety standards, yields several results. The technological approach, the basis for the 1966 legislation, is shown to produce mistakes. Benefits are overestimated and endangerment of nonoccupants is ignored. The risk homeostatic approach, the devil's idea to some in the safety community, is shown to be a limiting case of the more general individual net benefit approach. Rationality and competency in travelers' safety decisions are reviewed in a

broad context. Evidence beyond the realm of behavioral ix x The Regulation of Motor Vehicle and Traffic Safety psychology indicates considerable, albeit imperfect, competency in traffic safety decisions. Conventional benefit-cost analysis is critiqued. Existing studies of passive restraints are shown to overestimate net benefits because travelers' responses and costs are ignored.

Publishes original critical reviews of the significant literature and current developments in psychology.

The first 1,000 days, from conception to two years of age, is a critical period of growth and development. Exposures to dietary, environmental, hormonal, and other stressors during this window have been associated with an increased risk of poor health outcomes, some of which are irreversible. The book addresses this crucial interval of early life across biological disciplines, linking concepts related to all biological fields to outcomes during the first 1,000 days (e.g. fetal growth and pregnancy outcomes) and beyond (e.g. gut microbiome and cardiovascular disease later in life). The strength of this book lies in its cross-disciplinary nature.

Uncle Sam's Locomotives looks at these magnificent locomotives and discusses how and why the designs were chosen, how they related to existing designs, what standardization entailed, and how each performed."

and the historical forces that shaped him. The senator's distrust of centralized power, Campbell argues, helps explain his ironic reputation as a foe of civil rights and a champion of civil liberties. --from publisher description.

The Handbook of Psychosocial Rehabilitation is designed as a clinical handbook for practitioners in the field of mental health. It recognises the wide-ranging impact of mental illness and its ramifications on daily life. The book promotes a recovery model of psychosocial rehabilitation and aims to empower clinicians to engage their clients in tailored rehabilitation plans. The authors distil relevant evidence from the literature, but the focus is on the clinical setting. Coverage includes the service environment, assessment, maintaining recovery-focused therapeutic relationships, the role of pharmacotherapy, intensive case management and vocational rehabilitation.

Based on a solid theoretical basis of assessment-as-learning and updated empirical evidences, this timely book significantly expands the existing scope of assessment-as-learning typically developed in Western contexts. This edited volume updates theoretical and empirical advances in assessment-as-learning in complex learning processes, brought together by an international panel of authors. The contributors provide a wide range of practical ways to harness the power of assessment-as-learning to make it work more effectively not only in the classroom, but also across other achievement-related situations (e.g. examinations, learning processes before and after classes). Assessment as Learning provides a deep contemporary insight into the field of formative assessment, and brings much-needed international perspectives to complement the current Western-focused research. This is a valuable contribution to the discussion, and provides useful insight for researchers in Education.
