This book offers a service science perspective on platform orchestration and on collaborative consumption, providing an overview of research topics related to service dominant logic in multi-sided markets. The chapters give an international and multi-disciplinary overview of the current topics of digital service platforms from many angles. This overview helps in filling the gap between service science and recent research of the platform economy and paves the way for future service platform research. Open standards and distributed databases such as blockchain configurations increase the connectivity of business ecosystems as devices and systems exchange data with each other instead of through intermediaries. This exchange opens up opportunities for new value constellations, makes services globally scalable, and connects local service systems as integrated systems of systems. The book brings together established academics from a number of disciplines. This collaboration makes it possible to provide novel constructs and empirical results that help the reader to understand how value is co-created and orchestrated in the era of digital service platforms. In addition to theory building, practical implications for wider managerial and policy use are highlighted. The topics in this book are related to service platform technologies; organizational capabilities; and strategies and management in the contexts of retail, healthcare, and the public sector. A wide selection of case studies is used to demonstrate the implications of platforms for different service and economic contexts. Combining both theory and practice, this book is highly recommended for readers interested in the service and marketing point of view on the platform economy and for practitioners strategizing for scalable service platforms. Chapters 4 and 10 are available open access under a Creative Commons Attribution 4.0 International License via [link.springer.com](http://link.springer.com).

Risk management and contingency planning has really come to the fore since the first edition of this book was originally published. Computer failure, fire, fraud, robbery, accident, environmental damage, new regulations - business is constantly under threat. But how do you determine which are the most important dangers for your business? What can you do to lessen the chances of their happening - and minimize the

impact if they do happen? In this comprehensive volume Kit Sadgrove shows how you can identify - and control - the relevant threats and ensure that your company will survive. He begins by asking 'What is risk?', 'How do we assess it?' and 'How can it be managed?' He goes on to examine in detail the key danger areas including finance, product quality, health and safety, security and the environment. With case studies, self-assessment exercises and checklists, each chapter looks systematically at what is involved and enables you to draw up action plans that could, for example, provide a defence in law or reduce your insurance premium. The new edition reflects the changes in the global environment, the new risks that have emerged and the effect of macroeconomic factors on business profitability and success. The author has also included a set of case studies to illustrate his ideas in practice.

The four-volume set LNCS 8513-8516 constitutes the refereed proceedings of the 8th International Conference on Universal Access in Human-Computer Interaction, UAHCI 2014, held as part of the 16th International Conference on Human-Computer Interaction, HCII 2014, held in Heraklion, Crete, Greece in June 2014, jointly with 14 other thematically similar conferences. The total of 1476 papers and 220 posters presented at the HCII 2014 conferences was carefully reviewed and selected from 4766 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The total of 251 contributions included in the UAHCI proceedings were carefully reviewed and selected for inclusion in this four-volume set. The 75 papers included in this volume are organized in the following topical sections: design for aging; health and rehabilitation applications; accessible smart and assistive environments; assistive robots and mobility, navigation and safety.

Since the late 1970s a number of regional developments have impacted upon South Korea's political and economic standing in Asia. China's spectacular growth and closer integration with its neighbouring economies, along with a tendency toward more assertive political and diplomatic activity, have deeply altered both the economic and political East Asian environment. Simultaneously, the 1997-98 financial crisis catalysed a process of increased regional co-operation in East Asia. China's rise has imposed a leadership problem that may constitute a major obstacle on the road to deeper regional integration, as well as add force to the need for collective action, and it is this paradox that may give South Korea a key role in the reorganization of the region. Moreover, inter-Korean relations and Korea's future security environment may also feel the effects of the rise of China. Korea in the New Asia seeks to analyze to what extent and how South Korea may contribute to, and take advantage of, the new regional configuration in East Asia. The book represents the first study to address Korea's regional policy responses to the rise of China as an economic power and the regional economic integration of East Asia. Written by an international team of experts, this multidisciplinary study will appeal to researchers, academics and students with an interest in international relations, security studies, economics and East Asian politics. .
