It has been more than sixty years since the end of World War II and the liberation of the survivors of the Holocaust. Since then, many rich personal and historical accounts have been written of the horrific events of those times. Mental health workers have strived to give survivors solace for their loss, and help them return to a meaningful life.

Meanwhile, scholars continue to ponder the inexplicable facts of genocide. Yet Studies

of the Holocaust: Lessons in Survivorship continues to be timely. Based on more than 100 interviews in nine U.S. locations, the book offers a powerful view of survivors' hope, determination, and resilience. Study questions elicited survival strategies, and revealed how, following the war, survivors overcame the horrors of the Holocaust, formed families, built careers, and gave to their communities. Survivor quotes taken from these interviews illuminate how the survivors maintained competence into old age. While memories of pain persist, accomplishments are acknowledged, and provide lessons for students of human development, mental health practitioners, and the general public. This book was previously published as a special issue of *Journal of Human Behaviour and the Social Environment*.

Electronic Inspection Copy available for instructors here With the growth of work based learning and practitioner research this book leads the way by addressing key issues faced by 'insider-researchers' - learners, practitioners and managers doing research projects in the organizations and communities in which they themselves work, or where they are already familiar with the setting. The authors explore the implications of these research contexts, and discuss approaches and methodologies that work based researchers might adopt, with a particular focus on ethics - one of the key concerns for those undertaking a research project of this type. This book is an authoritative and readable guide to the theory and practice of work based research. It is for anyone undertaking a research project based on work practice, including learners on postgraduate, undergraduate and doctoral programmes. Practitioners, managers and participants in work based courses or modules in education, healthcare and business management, will find it particularly useful.

An innovative approach to winning more profitable sales in the growing professional services industry In recent years, professional services providers have had to rethink their sales methods and adapt to profound changes in the way clients buy services. In response, *Winning the Professional Services Sale* argues for fundamental changes in the seller's mindset and sales strategies. Rather than pressing the sale, salespeople must help clients buy--the way that works best for each client. This new approach gives buyers what they now want in a services seller: a consultative problem solver, change agent, and solution integrator, all rolled into one. Author Michael McLaughlin presents a strategy for winning new business with a holistic approach to each client relationship. Only by fully understanding a sale from every angle, including its impact on the client's business and career, can salespeople thrive in the new era of the service economy.

For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce. Those responsible for professional development in public and private-sector organizations have long had to deal with an uncomfortable reality. Billions of dollars are spent on formal education and training directed toward the development of job incumbents, yet the recipients of this training spend all but a fraction of their working life outside the training room--in meetings, on the shop floor, on the road, or in their offices. Faced with the need to promote "continuous learning" in a cost-effective manner, trainers, consultants, and educators have sought to develop ways to enrich the instructional and developmental potential of job assignments--to understand and facilitate the "lessons of experience." Not surprisingly, social and behavioral scientists have weighed in on the subject of on-the-job learning, and one message of their research is quite clear. This message is that much of the knowledge people use to succeed on the job is acquired implicitly--without intention to learn or awareness of having learned. The common language of the workplace reflects an awareness of this fact as people speak of learning "by doing" or "by osmosis" and of professional "instinct" or "intuition." Psychologists, more careful if not clearer in their choice of words, refer to learning without intention or awareness as "implicit learning" and refer to the knowledge that results from this learning as "tacit knowledge." Tacit Knowledge in Professional Practice explores implicit learning and tacit knowledge as they manifest themselves in the practice of six knowledge-intensive professions, and considers the implications of a tacit-knowledge approach for increasing the instructional and developmental impact of work experiences. This volume brings together distinguished practitioners and researchers in each of the six disciplines to discuss their own research and/or professional experience and to engage each other's views. It addresses professional practice in its totality -- from the technical to the interpersonal to the crassly commercial -- not simply a few aspects of practice that lend themselves to controlled study. Finally, this edited volume seeks to go beyond the enumeration of critical experiences to an understanding of the psychological mechanisms that underlie learning from experience in professional disciplines and, in so doing, to lay a foundation for innovations in professional education and training.
