

Section 25 1 Nuclear Radiation Pages 799 802

Includes appendices.

Annals of the International Geophysical Year, Part I: Nuclear Radiation: Techniques for Radioactivity Measurements covers the techniques for radioactivity measurement, observations of aurora and airglow, and instructions for the longitude and altitude program. This book is organized into three parts encompassing 11 chapters. The first part presents the techniques for radioactivity measurements. The second part describes the geographical distribution, visual observations, and photographic and photometric evaluations of aurora and airglow. The third part provides instructions for operation of the moon-position camera, including camera settings and operation, field plotting, and star marking. This part also presents additional instructions for PZT use in the longitude and latitude program. This book will prove useful to geophysicists and researchers in the allied fields.

Volume I/25A is the first one in a series of volumes on the properties of the excited states of all nuclei. The data presented are collected from all kinds of nuclear reactions, including measurements of reactions with neutrons and γ -rays not yet fully considered in previous compilations. The nuclei considered also comprise nuclei far from the stability line. The properties of excited nuclear states are of importance for scientific and practical applications. No systematic compilation of such data has been performed so far. The present compilation has been prepared by eminent experts in the field. One of the characteristics of Landolt-Börnstein is that data are evaluated before they are accepted for compilation. The idea is to present 'best values' which can be used with confidence by non-experts. The present Volume I/25A is providing new data (energy levels, branching ratios, cross-sections, spectroscopic factors, etc.) for nuclei with atomic numbers Z ranging from 1 (H) to 29 (Cu) published in 2005-2010, thus supplementing previous compilations. Additionally, sections of the Introduction are devoted to isomers and nuclear collective excitations, recent trends in the theory of nuclear structure and nucleon interactions (tensor force effects, nonstatistical effects), and γ -ray cascade measurements after neutron capture. In view of the large amount of data available some of the information is given online only at www.springermaterials.com.

Contains the 4th session of the 28th Parliament through the session of the Parliament.

Reviews the proposed joint effort of AEC, General Electric Co. and Consumers Power Co. on the construction, operation and testing of high power density of a nuclear power plant at Big Rock Point, Mich.

Presented in this document are the results of Nuclear Radiation Effects Test No. 10 which was conducted under the LASV-N2 Air Force Contract AF33(657)-12517. The irradiation was performed in the Air Force Ground Reactor during the period 25 February through 1 March 1964. A series of radar components, a secondary power unit, several flight test instrumentation sensors, several advanced computer components, and portions of a command control subsystem were exposed to nuclear radiation levels exceeding 5×10 to the 15th power fast neutrons/sq. cm and a gamma exposure of 5×10 to the 10th power ergs/gm(C). Dynamic test data recorded before, during, and after the irradiation are presented for magnetrons, high power metal-ceramic hydrogen thyratron tubes, pulse modulators, microwave ferrite devices, preamplifiers, a turbinegenerator unit, rate gyros, accelerometers, portions of a command control receiver and decoder, tunnel diodes, thin film parametron elements, and circuitrons. (Author).

Derived from the renowned multi-volume International Encyclopaedia of Laws, this book provides a systematic approach to legislation and legal practice concerning energy resources and production in South Africa. The book describes the administrative organization, regulatory framework, and relevant case law pertaining to the

development, application, and use of such forms of energy as electricity, gas, petroleum, and coal, with attention as needed to the pervasive legal effects of competition law, environmental law, and tax law. A general introduction covers the geography of energy resources, sources and basic principles of energy law, and the relevant governmental institutions. Then follows a detailed description of specific legislation and regulation affecting such factors as documentation, undertakings, facilities, storage, pricing, procurement and sales, transportation, transmission, distribution, and supply of each form of energy. Case law, intergovernmental cooperation agreements, and interactions with environmental, tax, and competition law are explained. Its succinct yet scholarly nature, as well as the practical quality of the information it provides, make this book a valuable resource for energy sector policymakers and energy firm counsel handling cases affecting South Africa. It will also be welcomed by researchers and academics for its contribution to the study of a complex field that today stands at the foreground of comparative law.

The third of three issues on workers' privacy in industrialized countries, this volume is devoted to testing of workers and job applicants to detect alcohol and drug abuse, HIV/AIDS, genetic abnormalities, psychological characteristics and honesty.

Nuclear Fusion by Inertial Confinement provides a comprehensive analysis of directly driven inertial confinement fusion. All important aspects of the process are covered, including scientific considerations that support the concept, lasers and particle beams as drivers, target fabrication, analytical and numerical calculations, and materials and engineering considerations. Authors from Australia, Germany, Italy, Japan, Russia, Spain, and the U.S. have contributed to the volume, making it an internationally significant work for all scientists working in the Inertial Confinement Fusion (ICF) field, as well as for graduate students in engineering and physics with interest in ICF.

This bestselling text continues to lead the way with a strong focus on current issues, pedagogically rich framework, wide variety of medical and biological applications, visually dynamic art program, and exceptionally strong and varied end-of-chapter problems. Revised and updated throughout, the eleventh edition now includes new biochemistry content, new Chemical Connections essays, new and revised problems, and more. Most end of chapter problems are now available in the OWLv2 online learning system. - See more at: http://www.cengage.com/search/productOverview.do?Ntt=bettelheim|32055039717924713418311458721577017661&N=16&Ntk=APG%7CP_EPI&Ntx=mode+matchallpartial#Overview Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.
