20 Keys has helped many manufacturing companies integrate the top manufacturing improvement methods into a coordinated system for drastic and continual improvement in involvement, quality, and productivity. This program provides the strategies necessary to achieve ambitious goals through a five-level scoring system. The revised edition is improved with upgraded criteria for the five-level scoring system to guide your company to world-class status. New material and updated layout make implementation even easier. Two valuable case studies demonstrate effective use by both a Japanese company and an American manufacturer.

Much has been said and written about Japan's manufacturing prowess. Most of the comment comes from people who are merely visitors to the country and can be best classified as 'observers looking in from the outside'. Other views come from the Japanese themselves in which the double barrier of culture and language filters out much information that would be of real value to Western industrialists. Neither of these limitations apply to John Hartley, who has been resident in Japan for the past five years. He understands the culture, can speak the language and has extensive contacts at the highest level. Therefore, he is in a unique position to report on the Japanese scene and its activities in advanced manufacturing technology. This he has been doing on a regular basis to IFS magazines: The Industrial Robot, Assembly Automation, Sensor Review and The FMS Magazine. Most of the material in this book is from John Hartley's 'pen' and represents his most significant contributions on flexible automation in Japan to these journals over the last three years. It is augmented with a few other articles written by leading authorities on new technology in Japanese manufacturing industry.

Information Control Problems in Manufacturing Technology 1979 is a compilation of papers presented at the second IFAC/IFIP Symposium held at Stuttgart, Germany on October 22-24, 1979. The book discusses the following topics: flexible manufacturing systems research; information processing in large and small systems; materials handling in a manufacturing system; control requirements in industrial robot use; and quality assurance in automated manufacturing processes. The text gives an overview of the Integrated Computer Aided Manufacturing program employed in aerospace batch manufacturing. One paper then presents a research and development program of Japan pertaining to use of lasers in a flexible manufacturing system complex. Another paper discusses the development and set-up of two flexible and different manufacturing systems; the paper also explains the appropriate information processing system that will control such complicated manufacturing processes. Another paper presents the advances in computers for quality control applications that are expected through lower hardware costs and better utilization of statistical methods. Mechanical engineers, technical designers, and students with serious interest in automatic control and computer-aided systems will find this book valuable.
