It presents an overview of relevant research on reading and how it can best be used to support and enhance writing instruction.

As lawyers, we must not, in hot pursuit of common law, outrun common sense. The dread of that eventuality prompted this book. Learned Writing promotes common sense in legal language. Plain language, which is commonsensical, broadens access to legal documents, thus democratizing the law. If democracy is government of the people, by the people, and for the people, law is the language in which government interacts with the people—it is the language of democracy. The people whose government speaks

through law must understand what is said. No democratic society should brook legalese, a dense, verbose dialect known only to lawyers. What then should society do to redress the lawyer-induced obscurity? A Shakespearean character had an alarming proposal: "The first thing we do, let's kill all the lawyers." Apparently, that proposal was not enthusiastically endorsed, which explains why we're still here. A milder remedy—enrolling lawyers in language classes—has been muted, which explains why this book is in your hands. Learned Writing motivates lawyers to prefer plain language to the legalese and verbosity that have besmirched legal writing for centuries. This book is as sweeping a treatment of its subject as you can find anywhere.

Grounded in contemporary genre theory, this text provides practical ideas about how to develop a sophisticated research paper. It respectfully addresses undergraduate students as apprentice scholars, thus departing from journalistic approaches to composition. *Designs for Disciplines* contains ample instructional commentary, and is also a reader. In most cases, discussion material in each chapter is supplemented by a selection of sample essays.

This book serves as a reference for engineers, scientists, and students concerned with the use of materials in applications where reliability and resistance to corrosion are important. It updates the coverage of its predecessor, including coverage of: corrosion rates of steel in major river systems and atmospheric corrosion rates, the corrosion behavior of materials such as weathering steels and newer stainless alloys, and the corrosion behavior and engineering approaches to corrosion control for nonmetallic materials. New chapters include: high-temperature oxidation of metals and alloys, nanomaterials, and dental materials, anodic protection. Also featured are chapters dealing with standards for corrosion testing, microbiological corrosion, and electrochemical noise.

This comprehensive and detailed analysis of second language writers' text identifies explicitly and quantifiably where their text differs from that of native speakers of English. The book is based on the results of a large-scale study of university-level native-speaker and non-native-speaker essays written in response to six prompts. Specifically, the research investigates the frequencies of uses of 68 linguistic (syntactic and lexical) and rhetorical features in essays written by advanced non-native speakers compared with those in the essays of

native speakers enrolled in first-year composition courses. The selection of features for inclusion in this analysis is based on their textual functions and meanings, as identified in earlier research on English language grammar and lexis. Such analysis is valuable because it can inform the teaching of grammar and lexis, as well as discourse, and serve as a basis for second language curriculum and course design; and provide valuable insight for second language pedagogical applications of the study's findings.
