'The World Bank South Asia Economic Update 2010: Moving Up, Looking East' is the World Bank's comprehensive annual report on the region's economies. In this first edition, the Bank finds that South Asia's strong rebound since March 2009 is comparable to that in East Asia. Government policy, external support, resumption of private spending and global recovery are driving the rebound. Robust and timely policy interventions were, and continue to be, a key to confidence and recovery. South Asia's particular strengths and forms of global integration not the lack of it were the main factors that allowed greater resilience. As a special topic, the report examines and recommends three principal directions to reposition South Asia's trade and investment integration policies and profitably expand their domestic economies in both manufacturing and services.

Tourism in Palestine has been receiving an increasingly important profile given its economic and religious importance and the significant role it plays in Israeli-Palestinian relations, representation of Palestinian statehood and identity, and wider Middle Eastern politics. Nevertheless, Palestine, like much of the Middle East as a whole, remains extremely underrepresented in tourism literature. This title aims to fill this void by being the first book dedicated to exploring the significance of tourism in relationship to Palestine. The book examines the role of tourism in Palestine at three main levels. First, it provides an overview of destination management and marketing issues for the tourism industry in Palestine and addresses not only the visitor markets and the economic significance of tourism but also the realities of the difficulties of destination management, marketing and promotion of the Palestinian state. Second, it provides a series of chapters and case studies that interrogate not only the various forms of tourism in Palestine but also its economic, social, environmental and spiritual importance. This section also conveys a

book argues that this framework allows for human rights protection on a transnational level, while constructing regional identities. Looking at the four key regional integration processes, namely the Caribbean Community, the Central American Integration System, the Andean Community of Nations and the Southern Common Market, and also at the North American Free Trade Agreement, it shows how the integration process has reached a considerable degree of consolidation. Writing on key sources in English for the first time, this book will be essential reading for all free trade and human rights scholars.

In the last four decades, technological progress led to an electrification of stock trading systems. It was realized that the profitability of trading strategies could be increased by employing computer algorithms to trade autonomously. This led to the implementation of High Frequency Trading (HFT). Theoretically HFT should increase efficiency in financial markets but it seems that, at least under certain circumstances, it causes market instability. The aim of this paper is to discuss the effect of HFT on market quality and why HFT cannot be fully explained by the neoclassical theory of economics. Therefore, the controversial positions in literature will be presented and discussed. It is especially referred to the influence of HFT on liquidity, price discovery and volatility. Primarily, its negative effect on volatility seems to contravene the modern finance. Furthermore, in the course of this work it will be illustrated that, by employing strict regulation of financial markets, this negative impact cannot be reduced to a sufficient extent in order for HFT to be characterized as market optimizing, according to the neoclassical theory of economics."
